Synthetics Mineral Oils and Bio Based Lubricants Chemistry and Technology, Second Edition (Chemical Industries)

Published: February 4, 2013

Q: What are the major differences between synthetic and mineral oils?

A: Synthetic oils are man-made fluids designed to provide superior performance compared to mineral oils. They typically exhibit higher thermal and oxidative stability, lower volatility, and better low-temperature fluidity. Mineral oils, on the other hand, are derived from petroleum and contain a mixture of hydrocarbons.

Q: What are the advantages of using bio-based lubricants?

A: Bio-based lubricants are made from renewable resources such as vegetable oils or animal fats. They offer several advantages over conventional lubricants, including biodegradability, reduced toxicity, and potential for lower environmental impact.

Q: What are the main chemical components of synthetic lubricants?

A: Synthetic lubricants are composed of various chemical compounds, including polyalphaolefins (PAOs), esters, silicones, and perfluoropolyethers (PFPEs). PAOs are non-polar hydrocarbons with excellent oxidative and thermal stability. Esters are polar compounds that provide good lubricity and low volatility. Silicones are silicon-based fluids known for their high temperature resistance. PFPEs are fluorinated hydrocarbons with exceptional thermal and chemical stability.

Q: How are synthetic lubricants manufactured?

A: Synthetic lubricants are typically produced through a process called olefin polymerization. In this process, olefins (unsaturated hydrocarbons) are reacted with catalysts to form long chain polymers. The resulting polymers are then refined and blended to create the desired lubricant properties.

Q: What are some applications of synthetic and bio-based lubricants?

A: Synthetic and bio-based lubricants are widely used in various industrial and automotive applications. They can be found in engines, transmissions, gearboxes, bearings, and hydraulic systems. These lubricants offer improved performance, reduced downtime, and extended equipment life.
