Upon discovering that Racso was taking part in the rats' efforts to sabotage a dam, Jenner bit into an electrical cable to assist the effort, suffering fatal electric shock in the process.

**What kind of rodent is Mrs. Frisby?** Mrs. Frisby and the Rats of NIMH is the story of a widowed field mouse named Mrs. Frisby, whose youngest son, Timothy, has fallen ill.

**How do Mrs. Frisby and the Rats of Nimh end?** Two rats do not make it out before the chamber is gassed, but it is never revealed which two rats it was. The others make their way into the hills, and Mrs. Frisby and her family make their way to their summer home, healthy and safe.

**What happened to Justin in Mrs Frisby and the Rats of NIMH?** In the end of the original story, O'Brien hints that Justin sacrificed his life when he went back to rescue a fallen rat, but Conly chose to keep Justin alive and well in her sequel.

**Why is the secret of Nimh 2 so bad?** It is also considered an abomination due to poor animation, musical, characters and plot as well, which only die-hard NIMH fans can experience easily.

**What happened to Mrs. Frisby's husband?** Jonathan also maintained his association with the rats, taking pains to hide this from his family. He would also take part in their missions to slip sleeping powder into the food of Dragon, the Fitzgibbons' fierce cat. Unfortunately, during one such mission Jonathan perished, leaving his family bereaved. Mrs.

**Who is the bad rat in the rats of NIMH?** Jenner is a hateful, power-hungry and heartless rat of NIMH, who opposed their leader, the old and wise Nicodemus just because he hated not being in power and opposed the drastic change for the better promised, wanting things to remain the same.

**What treasure did Mrs. Frisby find?** Mrs Frisby hopped closer and then, carefully, crept up the side of the stump and peered inside. When her eyes got Page 13 used to the dark, she saw that she had found a treasure: a winter's supply of food, carefully stored and then, for some reason, forgotten or abandoned.

**Why does Mrs. Frisby tell her children the whole story?** Mrs. Frisby tells her children the whole story of their father because they have a right to know, and they move to their summer home.

**Why does Mrs. Frisby go to see Mr. Ages?** Role in The Films Mr. Ages helps Mrs. Brisby giving her medicine to help her son Timothy recover from pneumonia.

**Why is Mrs. Frisby worried about moving day?** Mrs. Frisby knows it is moving time – time to leave the fields before their house is plowed under, and move to their summer home. Usually this is no problem, but this year her son Timothy is sick and cannot be moved.

**Why is The Secret of NIMH so scary?** Violence & Scariness Lots of creepy, dark imagery, only occasionally lightened with humor. A scary and dramatic sword fight between rats with a little blood that results in the death of one rat. Two bad rats plot to kill a main character and make it look like an accident; they are successful.

**What happened to Nicodemus in Rats of NIMH?** Nicodemus was an old prophet in The Secret of NIMH. He was the wise, mystical leader of the rats until Jenner killed him. Derek Jacobi did his voice who would later go on to play The Master from Doctor Who.

**Why doesn't Mrs. Frisby feel guilty about taking the treasure that is not hers?** She could not carry it all. Why doesn't Mrs. Frisby feel guilty about taking the treasure that is not hers? The owner was probably shot by a hunter.

His prophecies and teachings continue to guide Arthur and his successors throughout the series. He is a reminder of the ancient traditions and wisdom that underpin the Pendragon legacy.

## **The Handbook of Leadership Development Evaluation: Essential Questions and Answers**

Evaluating the effectiveness of leadership development programs is crucial for ensuring their return on investment and continuous improvement. "The Handbook of Leadership Development Evaluation" provides comprehensive guidance on how to design, implement, and assess such evaluations. Here are five key questions and answers from the handbook:

### **1. What are the different approaches to leadership development evaluation?**

There are multiple approaches to evaluation, including outcome-based evaluation, process evaluation, and Kirkpatrick's model. Outcome-based evaluation focuses on the impact of the program on participants' behavior, performance, and organizational outcomes. Process evaluation assesses the implementation and delivery of the program, identifying areas for improvement. Kirkpatrick's model evaluates the

program on four levels: reaction, learning, behavior change, and results.

**2. How do you measure the impact of leadership development programs on individual outcomes?** Individual outcomes can be measured using self-report surveys, 360-degree assessments, and performance evaluations. These methods assess changes in leadership skills, behaviors, and attitudes. Additionally, qualitative methods such as interviews and focus groups can provide insights into participants' experiences and perspectives.

**3. How do you assess the impact of leadership development programs on organizational outcomes?** Organizational outcomes can be measured through objective data such as financial performance, customer satisfaction, employee turnover, and innovation rates. These measures can be compared before and after the program implementation to determine the impact. It is important to consider potential confounding factors and use appropriate statistical methods to minimize bias.

**4. What are some common challenges in evaluating leadership development programs?** Common challenges include a lack of clear goals, poor data collection, and difficulty in isolating the program's impact from other factors. Additionally, collecting data from busy participants and measuring long-term outcomes can be challenging. The handbook provides strategies to address these obstacles and ensure a rigorous evaluation process.

**5. How can you use evaluation findings to improve leadership development programs?** Evaluation findings can be used to identify areas for improvement in program design, delivery, and assessment. The findings can help refine the program's content, delivery methods, and evaluation strategies. Regular evaluation allows for continuous improvement and ensures that the program remains relevant and effective in meeting the evolving needs of organizations and leaders.

**What is the believing brain by Michael Shermer about?** 'The Believing Brain' by Michael Shermer delves into the neuroscience and psychology behind belief formation. Shermer explores how our brains are hardwired to seek patterns and create beliefs, often based on emotions and subjective experiences rather than evidence.

**What is the quote the believing brain?** The truth is out there. I want to believe. Try and penetrate with our limited means the secrets of nature and you will find that, behind all the discernible laws and connections, there remains something subtle, intangible and inexplicable. Veneration for this force beyond anything that we can comprehend is my religion.

**Does Michael Shermer believe in God?** Shermer was raised in a non-religious household, before converting to Christian fundamentalism as a teenager. He stopped believing in God during graduate school, influenced by a traumatic accident that left his then-girlfriend paralyzed.

**How does the brain believe?** The brain is a belief engine. From sensory data flowing in through the senses the brain naturally begins to look for and find patterns, and then infuses those patterns with meaning.

**What is the brain life theory?** Thus, the presence or absence of brain life truly defines the presence or absence of human life in the medical sense. When viewed in this way, human life may be seen as a continuous spectrum between the onset of brain life in utero (eight weeks gestation), until the occurrence of brain death.

**What is the brain gym theory?** The Brain Gym program calls for children to repeat certain simple movements such as crawling, yawning, making symbols in the air, and drinking water; these are intended to "integrate", "repattern", and increase blood flow to the brain.

**What part of the brain controls believing?** Frontal lobes play a major role in beliefs. Mental representations of the world are integrated with sub-cortical information by prefrontal cortex. Amygdala and Hippocampus are involved in the process of thinking and thus help in execution of beliefs.

**What is a famous quote about the brain?** Everything we do, every thought we've ever had, is produced by the human brain.

**What is the belief that everything is mind?** Panpsychism is the idea that consciousness did not evolve to meet some survival need, nor did it emerge when brains became sufficiently complex. Instead it is inherent in matter — all matter. In other words, everything has consciousness. Consciousness is not limited to humans

and other animals.

**What religion is Michael?** Michael, also called Saint Michael the Archangel, Archangel Michael and Saint Michael the Taxiarch is an archangel in Judaism, Christianity, Islam, and the Baha'i faith.

**Does John Malkovich believe in God?** I'm an atheist. I wouldn't say I'm without spiritual belief particularly, or rather, specifically. Maybe I'm agnostic, but I'm not quite sure there's some great creator somehow controlling everything and giving us free will. I don't know; it doesn't seem to make a lot of sense to me."

**Who believes Jesus is Michael?** It has been charged that Seventh-day Adventists hold the same belief as do the Jehovah's Witnesses concerning Michael—that Michael the archangel was Jesus Christ prior to His incarnation, and that he was a created being.

**What part of the brain believes in God?** devotional practice was reproducibly associated with activation in nucleus accumbens, ventromedial prefrontal cortex, and frontal attentional regions. Nucleus accumbens activation preceded peak spiritual feelings by 1–3 s and was replicated in four separate tasks. ...

**Why is belief so powerful?** Belief Creates Resilience Belief doesn't just survive adversity, it gets stronger because of it. Belief empowers people by giving them unshakable resolve. Belief is what animates the ability to respond to any situation with extraordinary toughness, tenacity, and determination.

**Can your brain trick you into believing something?** A cognitive distortion is a way your mind is "playing tricks" on you. And if you accept that your brain can fool you into seeing things that aren't there or not seeing things that are there, it should not be a leap to assert that sometimes in your thinking, you see reality through a false lens.

**What are the 3 brain theories?** The Triune Brain Hypothesis. As presented by MacLean in his 1990 book, the triune brain of mammals comprises three formations – a 'Reptilian,' or 'R-complex' formation, a 'Paleomammalian' formation, or limbic system, and a 'Neomammalian' formation (Figure 1).

**What is the hidden brain theory?** The “hidden brain” is a term Shankar created to describe a range of influences that manipulate us without our awareness. Some

aspects of the hidden brain have to do with mental shortcuts or heuristics, others are related to errors in the way memory and attention work. Some deal with social dynamics and relationships.

**What is the higher brain concept of death?** For the higher brain standard, the death of the cerebral hemispheres will be sufficient for the death of the person, as those are the parts of the brain which constitute the mind.

**How to workout your brain?**

**Does Brain Gym really work?** "There have been a few peer-reviewed scientific studies into the methods of Brain Gym, but none of them found a significant improvement in general academic skills."

**What is brain lock theory?** Brain lock is a term coined by Schwartz to describe obsessive-compulsive behavior. His 1997 book *Brain Lock: Free Yourself from Obsessive-Compulsive Behavior* outlines the disorder and its treatment.

**What is the god spot?** The so-called "God spot" in the brain is a theoretical concept that there is a single structure or area of the brain responsible for religious belief and experience. Most studies, however, have not shown there to actually exist this localized area responsible for all religiosity.

**What are the 4 types of beliefs?** Moreover, Ackermann (1972) examined beliefs in four different categories as behavioral beliefs, unconscious beliefs, conscious beliefs, and rational beliefs. Behavioral beliefs are not distinguished simply because of fixed behavioral patterns that anyone holding a certain belief will exhibit.

**What prayer does to the brain?** First, engaging in 12 minutes of personal reflection and prayer each day makes a profound impact on our brain. It strengthens a unique neural circuit that specifically enhances our social awareness and empathy and helps us love our neighbor by developing a heightened sense of compassion and subduing negative emotions.

**What did Einstein say about the mind?** Albert Einstein said, "The intuitive mind is a sacred gift and the rational mind is a faithful servant."

**What is a beautiful woman with a brain quote?** A beautiful woman is a beautiful woman, but a beautiful woman with a brain is an absolutely lethal combination.

**Who used his brain most in the world?** Einstein used 100% of his brain power, just as all humans do. There was a myth that lasted for many decades that said the average human only uses about 10% of their brain, and Einstein used 20–25% of his.
