These components exchange energy and matter, shaping the planet's environment and supporting life.

**2. What are the different types of rocks?** Rocks are classified into three main types: igneous, sedimentary, and metamorphic. Igneous rocks form from the cooling of molten material, sedimentary rocks from the accumulation and compaction of sediments, and metamorphic rocks from the alteration of existing rocks due to heat and pressure.

**3. What causes earthquakes?** Earthquakes are caused by the sudden release of energy when tectonic plates move past each other or when faults rupture. The movement can occur along fault lines or within the Earth's interior, generating seismic waves that can cause ground shaking.

**4. What is the difference between weather and climate?** Weather refers to the short-term conditions of the atmosphere, such as temperature, precipitation, and wind. Climate, on the other hand, describes the long-term average patterns of weather conditions over a specific region.

**5. What are the major environmental challenges facing our planet?** Major environmental challenges today include climate change, pollution, deforestation, and resource depletion. These challenges can have severe impacts on human populations, biodiversity, and the Earth's ecosystems.
