Why the Walls of Jericho Came Tumbling Down

Question 1: What is the biblical account of the fall of Jericho?

The biblical narrative in the Book of Joshua describes how the Israelites, after crossing the Jordan River, encountered the fortified city of Jericho. God instructed Joshua to have his troops march around the city once a day for six days, and on the

seventh day to circle it seven times while blowing trumpets. As the priests blew their trumpets, the people shouted, and the walls of Jericho collapsed, allowing the Israelites to capture the city.

Question 2: What is the significance of the fall of Jericho?

The fall of Jericho marked a turning point in the Israelites' conquest of the Promised Land. It demonstrated God's power and faithfulness, as He had promised to give them the land. The event also symbolized the Israelites' victory over their enemies and their establishment in Canaan.

Question 3: What archaeological evidence supports the biblical account?

Archaeological excavations in Jericho have revealed evidence of a catastrophic destruction during the late Bronze Age, approximately the time period described in the Bible. Excavators have discovered burnt walls and evidence of intense heat, suggesting a sudden collapse. However, it is difficult to determine whether this destruction was directly related to the biblical account.

Question 4: What geological factors may have contributed to the city's collapse?

Some scientists believe that geological factors, such as an earthquake or a landslide, may have caused the walls of Jericho to fall. The city was located in a seismically active area, and earthquakes could have weakened the walls or triggered a sudden collapse. Additionally, the city was built on a mound of loose earth, which could have been susceptible to landslides.

Question 5: What other theories have been proposed?

Other theories have been proposed to explain the fall of the walls of Jericho. Some suggest that the Israelites used trumpets to create a resonance that weakened the walls. Others propose that they employed rams or battering rams to breach the fortifications. However, there is no conclusive evidence to support any of these theories.
