Why is it called a gyrfalcon? The genus name is the Late Latin term for a falcon, Falco, from falx a sickle, referencing the talons of the bird. The species name is from the Latin rusticolus, a countryside-dweller, from rus, "country" and colere, "to dwell". The bird's common name comes from French gerfaucon; in Medieval Latin, it is gyrofalco.

What is the difference between a peregrine falcon and a gyrfalcon? The Peregrine Falcon is smaller, with narrower, more pointed wings than a Gyrfalcon. Peregrines also have stronger facial markings, with a thick black mustache stripe that Gyrfalcons don't have.

Is A gyrfalcon rare? Because Gyrfalcons breed so far north, most people encounter them as rarities spotted during winter in the northernmost U.S. and southern Canada.

Do Gyrfalcons live in the UK? The Gyrfalcon is a transient visitor to Britain with only a few sightings every year.

What is the fastest bird in the world? The peregrine falcon is best known for its diving speed during flight—which can reach more than 300 km (186 miles) per hour—making it not only the world's fastest bird but also the world's fastest animal.

What is the strongest hawk? The Ferruginous Hawk could easily be mistaken for an eagle. Noted ornithologist Arthur Cleveland Bent evocatively described the Ferruginous Hawk as "the largest, most powerful, and grandest of our buteos, a truly regal bird."

What is the most rarest falcon? The rarest species of falcon in the world is the Mauritius Kestrel. A massive conservation project started on this species in the

1970's and in 1977 only 4 birds were known to exist in the wild. Through techniques of captive breeding and release, there are now over 800 birds living on 3 different sub-populations.

How fast is a gyrfalcon? The gyrfalcon is the world's fastest bird in level flight with an average speed of 50-68 mph (80-109 kph). These powerful birds may initially be underestimated, but their strength becomes evident after a few seconds in the air.

Are Gyrfalcons good for falconry? Gyrfalcons have been highly regarded by falconers throughout falconry's history. In the Middle Ages, only a king could hunt with a Gyrfalcon. Gyrfalcons that nest in the arctic regions frequently begin breeding and laying eggs when the temperature is still below freezing.

The species prefers cliff faces for nesting sites; however, they occasionally use nests abandoned by ravens (*Corvus corax*) in trees.
