Q&A on Larry Williams' Futures Trading Strategies

www.ireallytrade.com

1. What is the Larry Williams Trading Band? The Larry Williams Trading Band is a technical indicator used to identify potential trading zones. It is calculated by taking a lookback period (commonly 20 or 50 bars) and determining the highest high and lowest low within that period. Two standard deviation lines are then plotted above and below these levels.

2. How is the Trading Band used? When the price of a futures contract trades within the Trading Band, Williams considered it to be in a neutral range. A close above the upper band was seen as a bullish signal, while a close below the lower band was considered bearish.

3. What are Williams' Overbought and Oversold Indicators? Williams developed two oscillators, the %R and the stochastic oscillator, to identify overbought and oversold conditions. The %R oscillator measures the relationship of the closing price to the Trading Band, while the stochastic oscillator compares the closing price to the range of prices over a specified period. A reading above 80% on either oscillator indicates an overbought condition, while a reading below 20% suggests an oversold condition.

4. What is the alligator indicator? The alligator indicator is a three-smoothed moving average system used to identify the prevailing trend. The three moving averages are plotted as lines on a chart: the "jaw" (13-period smoothed moving average), the "teeth" (8-period smoothed moving average), and the "lips" (5-period smoothed moving average). When the jaw is above the lips, it is considered a bullish trend. When the jaw is below the lips, it is considered a bearish trend.

5. How are these indicators used in combination? Williams recommends using the Trading Band, %R, stochastic oscillator, and alligator indicator together to form a comprehensive trading system. The indicators can provide insights into the market's overall trend, momentum, and potential trading zones. However, it is important to note that no trading system is foolproof, and it is essential to use proper risk management techniques and conduct thorough research before making any trades.
