What is a crowdsourcing platform? Crowdsourcing is “the practice of obtaining information or input into a task or project by enlisting the services of a large number of people, either paid or unpaid, typically via the internet” (Oxford).

What is the application of crowdsourcing? Crowdsourcing involves obtaining work, information, or opinions from a large group of people who submit their data via the Internet, social media, and smartphone apps. People involved in crowdsourcing sometimes work as paid freelancers, while others perform small tasks voluntarily.

Is crowd sourced data reliable? Crowdsourcing requires a crowd, not a handful! Consider the trade-offs between sample size and sampling issues. The reliability of crowdsourcing data is often questioned because of the lack of an underlying sampling frame. Crowdsourcing may not be the right tool if you need rigorous sampling and data structure.

How is crowdsourcing related to big data? The goal of a big data crowdsourcing model is to accomplish the given tasks quickly and effectively at a lower cost. Crowdsourcing workers can perform several tasks for big data operations like- data cleansing, data validation, data tagging, normalization and data entry.

What are the problems with crowdsourcing data? Another drawback of collecting data through crowdsourcing is the difficulty of tracking and evaluating the data collectors. For instance, it is possible that data collectors can intentionally or unintentionally submit plagiarized data or produce content of lower quality.
