**What is physical science answers?** Physical science is the study of the inorganic world. That is, it does not study living things. (Those are studied in biological, or life, science.) The four main branches of physical science are astronomy, physics, chemistry, and the Earth sciences, which include meteorology and geology.

**How does the thickness of paint sprayed on a surface change when the sprayer is held twice as far away?** 10/10 How does the thickness of paint sprayed on a surface change when the sprayer is held twice as far away? The paint is 1/4 as thick, in accord with the inverse-square law.

**What does it mean to say that something moving in a curved path has a tangential velocity?** Tangential Velocity is the component of motion along the edge of the circular path that is also tangent to the circle. It is the linear rate at which an object is moving at any point along its circular path.

**How does the brightness of light change when the source is held twice as far away?** The inverse square law shows that when light travels twice the distance its area grows four times as large and the brightness decreases by four times. The rate a light grows in area and decreases in brightness is related to the distance it travels from another point squared.

**Is physical science hard?** Physics is a challenging subject ? it's a combination of math and science that can be difficult even for the best of us.

**What grade level is physical science?** Overview. Purposefully created for 8th- or 9th-grade students, Exploring Creation with Physical Science, 4th Edition will lead students to appreciate, understand, and grasp the wonders of God's creation while exploring chemistry, physics, earth science, and scientific research.

**In what sense does the moon fall?** The moon falls in the sense that it keeps same distance from earth although it has tendency to fly away tangentially. It does not fall because it moves in a circular orbit and centripetal force is provided by earth.

**What is the liquid that controls the thickness or the thickness of the paint?** Explanation: The liquid that controls the thickness or thinness of the paint is called the Medium. It is added to the pigment and binder to dilute or adjust the consistency of the paint. The medium can also affect the drying time, texture, and finish of the paint.

**Where do you weigh more at the bottom of Death Valley? Why?** You weigh more in Death Valley because you are closer to the center of Earth.

**What is the curved path of a projectile motion called?** Trajectory: the curved path taken by a projectile. Horizontal distance: the distance a projectile moves while falling; also called range.

**How does radius affect tangential velocity?** What happens to tangential velocity as the radius of an object increases provided the angular velocity remains the same? It increases because tangential velocity is directly proportional to the radius.

**What is the formula for tangential force in circular motion?** The formula for tangential force is  $F = mAr$ , where  $m$  is the mass,  $A$  is the angular acceleration, and  $r$  is the radius of the circle.

**What is the inverse square law of irradiance?** Inverse square lawIrradiance of electromagnetic radiation from a point source of radiation decreases with distance from the source and obeys the inverse square law.

**What is the inverse square law of gravitation?** Gravitation is the attraction between objects that have mass. Newton's law states: The gravitational attraction force between two point masses is directly proportional to the product of their masses and inversely proportional to the square of their separation distance.

**What is the inverse square law of radiation?** Inverse square law states that: “The intensity of the radiation is inversely proportional to the square of the distance”. “The intensity of the light to an observer from a source is inversely proportional to the square of the distance from the observer to the source”.

**Is math or physics harder?** Why is Physics harder than Math? Answer: Physics demands problem-solving skills that can be developed only with practice. It also involves theoretical concepts, mathematical calculations and laboratory experiments that adds to the challenging concepts.

**Is physics harder or Biology?** Yes, A-Level Biology is quite harder than Physics based on the percentage of students who received A\*s and As. Take a look at the “Physics Grade in 2022” table below, where 16.4% of students achieved an A\*, and 22.1% received an A.

**How to pass physics?**

**What science is 9th grade?** Most commonly, 9th graders usually focus on biology; however the beauty of homeschooling is parents can choose what course they want their freshmen to begin with. These can include chemistry or physics.

---

**Is physics harder than chemistry?** Some people find Physics easier because it involves mainly mathematical concepts and logic, while others prefer Chemistry due to its mix of concepts, memorization, and hands-on lab work.

**What grade is physics?** In high school, physics is usually taught in 11th grade, although some students may take the course in 12th grade or as early as 10th grade depending on their academic level. Students will learn about the basic principles that govern the physical world.

**What are the physical sciences?** The four main branches of physical science are astronomy, physics, chemistry, and the Earth sciences, which include meteorology and geology.

**What are 5 examples of physical science?**

**What is physical science in 9th grade?** Course Objective: Physical Science is the study of matter and energy and includes chemistry and physics. It is a basis for the further study of chemistry and physics. Labs or investigations are used to give students hands on learning and practical applications as well as to teach the material.

**What is physical science for 5th grade?** In fifth grade, students learn about the physical properties of matter, including magnetism, physical states of matter, relative density, solubility in water, and the ability to conduct or insulate electrical and heat energy. Students explore the uses of light, thermal, electrical, and sound energies.

## **The Mythmaker Paul and the Invention of Christianity**

### **Introduction**

The figure of Paul the Apostle has been a subject of fascination and controversy for centuries. Some scholars have argued that Paul played a pivotal role in the creation of Christianity, while others maintain that his teachings were significantly different from those of Jesus and his followers.

**Q: Who was Paul the Apostle?**

A: Paul was a Jewish man who lived in the first century CE. He was initially a persecutor of early Christians but later experienced a conversion. Paul became one of the most influential missionaries in the early church, traveling throughout the Roman Empire and establishing Christian communities.

**Q: What was Paul's relationship to Jesus?**

A: Paul never met Jesus in person. His knowledge of Jesus came from the teachings of other apostles and from his own spiritual experiences. Paul believed that Jesus was the Messiah and that his death and resurrection had provided salvation for humanity.

**Q: How did Paul shape Christianity?**

A: Paul played a significant role in shaping the development of Christian doctrine. His letters, which were later included in the New Testament, provide insights into his beliefs about Jesus, the nature of God, and the role of faith in salvation. Paul also emphasized the importance of spreading the Christian message to both Jews and Gentiles.

**Q: Is it accurate to say that Paul invented Christianity?**

A: While Paul was a key figure in the development of Christianity, it would not be accurate to say that he invented it. Christianity originated with the teachings of Jesus and his disciples, and Paul's contributions were built upon this foundation. However, his writings and missionary work helped to solidify the faith and spread its message throughout the Roman Empire.

**Conclusion**

The figure of Paul the Apostle remains a pivotal one in the history of Christianity. His teachings and writings have had a profound impact on the development of the faith, and his legacy continues to be debated by scholars and theologians today. While Paul did not single-handedly invent Christianity, his contributions to its formation were undeniably significant.
