What is an iridology exam? Iridology is a theory that it's possible to assess health issues by analyzing changes in the appearance of the iris and pupil of the eye. Proponents believe that marks and colors in the iris can show various illnesses, separate from any kind of problem with the eye itself.

How much does an iridologist cost? However, most iridologists charge between \$60 and \$125 for an in-office iris analysis and consultation.

What is the difference between iridology and sclerology? Iridology involves examination of the iris – the colour portion of the eye, and sclerology exams the red lines in the whites of the eyes. These analyses are a science and an art and are not diagnostic tools. It is a gentle non-invasive way of identifying inherited strengths and deficiencies in the body.

Does iridology really work? Is iridology legitimate? While there are many people who practice iridology, it is not scientifically backed. In fact, some scientists and eye care professionals strongly discourage the methods behind iridology, because they can be potentially harmful to those with serious underlying conditions.

Is iridology covered by insurance? Payment. Iridology is not covered by insurance.

Can iridology detect illness? Patterns, colors, and other characteristics of the iris hold information about a patient's systemic health. Iridologists claim they can use the charts to distinguish between healthy systems and organs in the body and those that are overactive, inflamed, or distressed.

Is it reasonable to believe in iridology? The pseudoscience known as iridology makes the unsubstantiated claim that it can identify medical disorders by examining the iris, the colored portion of the eye.

What part of the body does iridology concern? Iridology is the study of the patterns on the iris, the colored part of your eye. The iris is one of the most intricate and fascinating tissue structures in the human body. The claim is that iridology can provide clues about a person's health status, as well as the functioning of various organ systems.

Can iridology detect hormone imbalance? Iridology has historically been used to assess inherent and current health status and may help to identify underlying health issues, including spinal misalignment, hormonal imbalance, endocrine dysfunction, digestive disorders and musculoskeletal problems.

What iridology can reveal? Patterns, colors, and other characteristics of the iris hold information about a patient's systemic health. Iridologists claim they can use the charts to distinguish between healthy systems and organs in the body and those that are overactive, inflamed, or distressed.

Do iridology really work? The pseudoscience known as iridology makes the unsubstantiated claim that it can identify medical disorders by examining the iris, the colored portion of the eye. Iridology does not provide a reliable means of diagnosis, and there is no scientific proof to back up its claims.

What is the purpose of iridology? An iridologist uses the blood vessels in the whites of the eyes as a way to discover environmental and food allergies and sensitivities. Iridologists try to determine the nature of the allergy or sensitivity by comparing various markers in the iris and then can recommend treatment.
