

A marriage preparation inventory focus on the family

[Download Complete File](#)

Marriage Preparation Inventories: Understanding and Utilizing**

What is a Marriage Preparation Inventory?

A marriage preparation inventory is a tool used to assess a couple's readiness for marriage and identify areas for growth. It covers various topics related to the relationship, including communication, conflict resolution, financial management, and intimacy.

What is the FOCCUS Inventory?

The FOCCUS (Facilitating Open Couple Communication, Understanding, and Study) inventory is a widely recognized marriage preparation inventory. It is designed to help couples explore their individual and shared values, communication styles, and relationship dynamics.

FOCCUS in the Catholic Church

FOCCUS is particularly popular within the Catholic Church as a tool for premarital counseling. Catholic marriage prep programs often incorporate the FOCCUS inventory to facilitate meaningful discussions about important aspects of the marriage covenant.

Three Most Common Premarital Test Inventories

Besides FOCCUS, other common premarital test inventories include:

- Relationship Assessment System (RAS)
- Premarital Couple Assessment (PCA)
- Marital Expectations Inventory (MEI)

Quality of Marriage Inventory (QMI)

The QMI is a research-based inventory used to evaluate the quality of a marriage. It measures various dimensions of relationship satisfaction, including communication, affection, and commitment.

Purpose of Marriage Preparation

Marriage preparation aims to provide couples with the knowledge, skills, and support necessary for a successful marriage. It helps them understand the challenges and rewards of marriage, navigate potential conflicts, and establish a solid foundation for their relationship.

Marriage Expectation Inventory (MEI)

The MEI explores a couple's expectations and perceptions about marriage. It focuses on areas such as gender roles, parenting styles, and financial management. By aligning expectations, couples can reduce potential sources of conflict.

Focus of Premarital Counseling

Premarital counseling focuses on preparing couples for the demands of marriage. It addresses topics such as communication, decision-making, conflict resolution, and relationship building. Couples are encouraged to discuss their expectations, values, and concerns in a safe and supportive environment.

Marriage Assessment

Marriage assessment refers to the evaluation of a couple's relationship through inventories or counseling sessions. It helps identify areas of strength and weakness and provides guidance for improving the quality of the marriage.

FOCCUS Cost and Duration

The cost of FOCCUS varies depending on the facilitator and location. It typically ranges from \$100 to \$250. The inventory typically takes around 3-4 hours to complete.

Catholic Marriage Prep

In Catholic marriage prep programs, couples attend a series of sessions led by a priest, deacon, or trained facilitator. These sessions cover topics related to the sacrament of marriage, including the importance of communication, forgiveness, and faith.

Value of Preparing for Marriage

Preparing for marriage provides couples with numerous benefits, including:

- Increased communication and understanding
- Reduced risk of divorce
- More positive and fulfilling relationships
- Increased satisfaction and stability within the marriage

Three Goods of Marriage

According to the Catholic Church, the three goods of marriage are:

- Unity: The lifelong bond between husband and wife
- Procreation: The potential for bringing new life into the world
- Sanctification: The growth in holiness that comes from living out the marriage covenant

Stages of Marriage Preparation

Marriage preparation typically involves three stages:

1. Pre-engagement: Exploring personal readiness and compatibility
2. Engagement: Focused discussions about the relationship and preparing for the wedding
3. Post-wedding: Ongoing support and guidance for the newly married couple

Best Preparation for Marriage

The best preparation for marriage is an ongoing process of self-reflection, communication, and commitment. It involves understanding one's own needs, values, and expectations, as well as developing the skills and attitudes necessary for a healthy and fulfilling relationship.

Other Marriage Preparation Terms

- Marital inventory: A comprehensive assessment of a couple's relationship used for research or therapy.
- Test before marriage: A general term for marriage preparation inventories or assessments.
- 4 P's of marriage: Passion, purpose, protection, and permanence.
- Marital satisfaction inventory: A tool used to measure a couple's satisfaction with their relationship.

What was America's Constitution a biography summary? Skillfully placing the document in the context of late-eighteenth-century American politics, America's Constitution explains, for instance, whether there is anything in the Constitution that is unamendable; the reason America adopted an electoral college; why a president must be at least thirty-five years old; and why— ...

Is Akhil Reed Amar an originalist? He holds the position of Sterling Professor of Law and Political Science at Yale University, where he is a leading scholar of originalism, the U.S. Bill of Rights, and criminal procedure.

What is Amar's thesis in this text? Amar's thesis is that the Founders did not enact the Bill of Rights primarily to protect individuals or minorities from the majority, but instead drafted the amendments to protect majority rule and states' rights against a potentially oppressive national government.

Which of the following excerpts from America's Constitution, a biography, is the clearest example of an analogy? Which of the following excerpts from America's Constitution: A Biography is the clearest example of an analogy? As the ultimate sovereign of all had once made man in his own image, so now the temporal

sovereign of America, the people themselves, would make a constitution in their own image.

What are the 3 main ideas of the US Constitution? First it creates a national government consisting of a legislative, an executive, and a judicial branch, with a system of checks and balances among the three branches. Second, it divides power between the federal government and the states. And third, it protects various individual liberties of American citizens.

What is a simple summary of the Constitution? The framers of the Constitution separated the powers of government into three branches, granting legislative power (the power to pass laws) to Congress, executive power (the power to administer the laws) to the president, and judicial power (the power to interpret and enforce the laws) to the courts.

Who is the true Father of the Constitution? Dr Bhimrao Ambedkar is known as the father of Indian constitution. On 29 August 1947, the Constituent Assembly set up a Drafting Committee. This Drafting Committee was headed by Ambedkar.

Who is considered the godfather of the Constitution? James Madison, America's fourth President (1809-1817), made a major contribution to the ratification of the Constitution by writing The Federalist Papers, along with Alexander Hamilton and John Jay. In later years, he was referred to as the "Father of the Constitution."

Who is the final interpreter of the US Constitution? As the final arbiter of the law, the Court is charged with ensuring the American people the promise of equal justice under law and, thereby, also functions as guardian and interpreter of the Constitution. The Supreme Court is "distinctly American in concept and function," as Chief Justice Charles Evans Hughes observed.

Who wrote America's Constitution? The main authors of the Constitution were James Madison, Alexander Hamilton, and John Jay. These three men were all delegates to the Constitutional Convention, and they played a leading role in drafting the document.

What are the most famous 3 words of the U.S. Constitution? Its first three words – "We The People" – affirm that the government of the United States exists to serve

its citizens. The supremacy of the people through their elected representatives is recognized in Article I, which creates a Congress consisting of a Senate and a House of Representatives.

What is the U.S. Constitution famous line? "We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defense, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of ...

Which of the following statements best explains why America's Constitution: A biography is an example of a historical narrative used as an argument? Which of the following statements best explains why America's Constitution: A Biography is an example of a historical narrative used as an argument? It presents a claim about a historical event and supports it with facts and details.

What is the basic electrical circuit analysis? Circuit analysis is the process of finding all the currents and voltages in a network of connected components. We look at the basic elements used to build circuits, and find out what happens when elements are connected together into a circuit.

What is the electrical circuit analysis method? There are three main circuit analysis techniques: the fundamental laws, using the node voltage method or the mesh current method. Ohm's law is a fundamental law used to analyze electrical circuits. Mathematically, Ohm's law can be expressed as $V = I \cdot R$. The node voltage method is based on Kirchhoff's current law.

Can ChatGPT solve circuits? Did ChatGPT fix the circuit? Not really. The experiment revealed that while ChatGPT could eventually arrive at the correct solution to the presented problem, the process was akin to casting a wide net of possibilities before honing in on the right answer.

What is the formula for basic circuit analysis? Electric Circuit Formula Requirement is defined as $R_{eq} = R_1 + R_2 + R_3 + \dots$. Additionally, the parallel circuit formula is $1/R_{eq} = 1/R_1 + 1/R_2 + 1/R_3 + \dots$. Where, R_{eq} is equal to the combined resistance of the series-connected resistors.

How hard is circuit theory? Engineering Circuit Analysis, also known as Circuit Theory, is difficult for most students primarily because the basic laws seem very simple. This leads the student to believe that the exam problems will not be too difficult, when in reality there is a large amount of technique in solving circuit problems.

How to learn electronic circuit analysis?

What math is used in circuit analysis? Linear Algebra: Used to solve systems of linear equations that arise in circuit analysis. Applications include network theory and the analysis of electrical circuits using matrices and vector spaces.

What are the three tests on an electrical circuit? Some of the most common electrical installation tests include insulation resistance testing, continuity testing, and ground fault circuit interruption (GFCI) testing. Performing regular electrical installation tests is an important way to ensure the safety of your home or office.

What is the best method to test an electrical circuit? A continuity tester is the simplest tool for the specific task of checking for continuity, while a multimeter also provides a wide range of other electrical testing uses. You can also use a circuit tester to check for continuity, but its best use is checking for proper grounding of your circuit.

How hard is it to learn circuits? Electronics is the science of controlling electricity, so it's a very important field that is, fortunately, less difficult to learn than you may think. You can start right away by reading up on electrical currents and circuits. For a more hands-on approach, order building kits or make your own circuits.

Can ChatGPT read electrical schematics?

Can you use magnets to complete a circuit? A magnetic circuit is made up of one or more closed loop paths containing a magnetic flux. The flux is usually generated by permanent magnets or electromagnets and confined to the path by magnetic cores consisting of ferromagnetic materials like iron, although there may be air gaps or other materials in the path.

What is the electrical theory for dummies? Electricity – An Organized Row of Electrons Almost all atoms can lose and acquire electrons. Some atoms have too many electrons and others lack them. So when moved by electric power electrons, they will go in the direction to compensate for the shortage. This flow is called the electrical current.

What is a circuit for dummies? An electronic circuit is a complete course of conductors through which current can travel. Circuits provide a path for current to flow. To be a circuit, this path must start and end at the same point. In other words, a circuit must form a loop.

What is DC theory for dummies? An electric current that flows continuously in a single direction is called a direct current, or DC. The electrons in a wire carrying direct current move slowly, but eventually they travel from one end of the wire to the other because they keep plodding along in the same direction.

Do electricians learn circuit analysis? Here are some of the key topics typically covered in electrical engineering education: Circuit Analysis: You learn about the fundamentals of electrical circuits, including Ohm's Law, Kirchhoff's Laws, network analysis techniques, and various circuit components like resistors, capacitors, and inductors.

Why is circuit analysis difficult? A correct analysis of an electric (or electronic) circuit requires a combination of understanding of the physics of the components; sufficient mathematical knowledge, including abstract mathematical concepts like complex numbers; and the ability to apply the circuit analysis techniques.

Why is electrical theory so hard? Theoretical Concepts Courses on electromagnetism or signal processing may seem abstract, requiring students to develop strong conceptual thinking skills to grasp how unseen forces like electric fields function in the real world.

What is the basic circuit theory? Circuit theory is a linear analysis; i.e., the voltage-current relationships for R, L, and C are linear relationships, as R, L, and C are considered to be constants over a large range of voltage and currents.

What is the formula for electrical circuit analysis? Each resistor that exists in the circuit has the full voltage. According to Ohm's law, the currents that flow via the individual resistors are $I_1 = V/R_1$, $I_2 = V/R_2$, and $I_3 = V/R_3$. Furthermore, conservation of charge implies that the total current happens to be the sum of these currents.

How to be good at circuit analysis? One of the best ways to improve your circuit analysis skills is to practice with examples. You can find plenty of examples in textbooks, online sources, or previous exams. Try to solve them by yourself, and then compare your solutions with the correct ones.

Can you use Ohm's law to analyze a circuit? Ohm's Law is $V = IR$, where V = voltage, I = current, and R = resistance. Ohm's Law allows you to determine characteristics of a circuit, such as how much current is flowing through it, if you know the voltage of the battery in the circuit and how much resistance is in the circuit. Created by Sal Khan.

What math do electricians use? Electricians use trigonometry and basic geometry principles during installations, repair, and maintenance. Trigonometry is a math branch dealing with the sides and angles of triangles. Electricians can apply tangent functions to determine the ideal angles to bend conduit sections along the proper wiring route.

Is calculus used in circuit analysis? Calculus kicks in when we get to circuits involving time—circuits with capacitors or inductors. We have to use calculus to get a meaningful solution.

How to test if power is off? Use a receptacle voltage tester by plugging the device into the outlet. The lights on the device will come on to indicate the presence of a live electrical current. Test an electrical outlet with a non-contact voltage tester by holding the tester about an inch away from the short slot on the outlet.

How to test if wire is live with a multimeter? Touch the black probe to a known ground (ground wire or a grounded metal part). If the wire is live, the multimeter will display the voltage. Reading the Results: If there's a voltage reading, the wire is live. If the reading is close to zero, the wire is not live.

How to ohm a wire with a multimeter?

What are the basics of an electrical circuit? A basic electric circuit is made of four main electric components: A power source which can be direct current (DC) or alternating current (AC). A battery is a DC power source whereas electricity at home is an AC power source. A load that converts the electric potential energy to another form.

What is the basic principle of electrical machine analysis? All electrical machines are based upon three principles namely: (i) Induction (ii) Interaction (iii) Alignment. Transformer operation is based on induction. Most of the rotating electrical machines use the principle of induction as well as interaction.

What are the basic fundamentals of AC circuit analysis? AC circuits are powered by an alternating source such as alternating currents or voltages which are sinusoidal and change periodically in direction and magnitude. In other words, voltage or current oscillates in a sine wave pattern and varies with time. The current repeats its value after each time interval $T = 2\pi/\omega$.

What are the three tests on an electrical circuit? Some of the most common electrical installation tests include insulation resistance testing, continuity testing, and ground fault circuit interruption (GFCI) testing. Performing regular electrical installation tests is an important way to ensure the safety of your home or office.

What are the 4 main parts of a basic circuit?

What are the 3 basic types of electrical circuits? Open circuit voltage is measured when there is no current flow through the circuit. There are three basic types of circuits: Series, Parallel, and Series-Parallel. Individual electrical circuits normally combine one or more resistance or load devices.

What are the 5 main circuits?

What is the basic principle of electric circuit? In two circuits of equal voltage, the current will be proportionately greater in the circuit of lower resistance. In circuits of equal resistance, the current flowing will be directly proportional to the voltage applied. Current is directly proportional to voltage, inversely proportional to

resistance.

What is the general principle of electricity? Principles of Electricity. In the most basic terms, electricity is the movement of electrons. The movement of electrons creates electric current or charge, which is harnessed to do work like power a lightbulb.

What is the principle of voltage and current measurement? Ohm's Law – Ohm's law states that, in an electrical circuit, the current passing through a conductor between two points is directly proportional to the potential difference (in other words, voltage drop or voltage) across the two points, and inversely proportional to the resistance between them.

How to learn circuit analysis? When doing circuit analysis, we need to understand the electrical quantities, relationships, theorems, and some essential laws. There are two essential laws we need to learn for circuit analysis. These are basic network laws namely: (1) KCL or Kirchhoff's Current Law, and (2) KVL or Kirchhoff's Voltage Law.

What are some basic circuit analysis laws?

What are the 3 requirements for a simple circuit?

How to test if wire is live with a multimeter? Touch the black probe to a known ground (ground wire or a grounded metal part). If the wire is live, the multimeter will display the voltage. Reading the Results: If there's a voltage reading, the wire is live. If the reading is close to zero, the wire is not live.

How to check for a bad wire with a multimeter?

How to test if a circuit is good? Connect the negative lead of a multimeter to the ground plane on the circuit board. Connect the positive lead of the multimeter to the power input of the board. Power on the board and check the voltage reading on the multimeter. The voltage reading should match the specified input voltage for the board.

Is college financial accounting hard? While it may not be universally acknowledged as the hardest business major, accounting is often considered more

challenging than many other business degrees. This is partly due to the stringent requirements to become a certified accountant and the rigorous exams one must pass to earn professional certification.

What is computer financial accounting? As its name suggests, "computerized accounting" is accounting done with the aid of a computer. It tends to involve dedicated accounting software and digital spreadsheets to keep track of a business or client's financial transactions. • Computerized accounting is a beneficial use of current technological advances.

What is a computerized financial system? Computerized accounting systems are software programs that are stored on a company's computer, network server, or remotely accessed via the Internet. Computerized accounting systems allow you to set up income and expense accounts, such as rental or sales income, salaries, advertising expenses, and material costs.

What is the financial accounting system? Define Financial Accounting System FAS is an accounting system where the financial data of the organization is maintained. Financial data contains any transaction which debits or credits the account balance. The Financial Accounting System must be defined in Billing & CRM solution application.

Is financial accounting a lot of math? Accountants need to be proficient in basic arithmetic, algebra, and statistics to analyze financial data, prepare reports, and ensure accuracy in their work. They may also use mathematical principles to perform tasks such as budgeting, forecasting, and financial analysis.

What is the hardest class in accounting major? Tax Accounting: Usually some of the most difficult classes for an accounting major as they delve into the minutia of tax codes, though this knowledge is a major source of income for accounting graduates.

What is the difference between manual accounting and Computerised accounting? Manual accounting involves the use of paper and pencil to record financial transactions, while computerized accounting uses specialized software. Manual accounting is more prone to errors due to manual data entry, while computerized accounting has built-in error checking and validation.

What are the two types of computerized accounting?

What is the primary goal of computerized accounting? It ensures efficient performance in accounting records. Greater Accuracy: Computerized accounting make sure accuracy in accounting records and statements. It prevents clerical errors and omissions in records. Relieve Monotony: Computerized accounting reduces the monotony of doing repetitive accounting jobs.

Is QuickBooks a computerized accounting system? QuickBooks is known to function as an accounting system, and invoices are no exception. It has the features of a comprehensive invoicing and billing system with customizable templates and secure data encryption.

Why do we need computerized accounting? Greater Control: A computerized Accounting system helps the management of a company to have greater control over its operations. This is more suitable for a company which is large in size and has multiple departments. All vital information is easily available with one click.

What are the problems faced in a computerized accounting system? Security risks are also a challenge of using a computerized accounting system. Since the system stores sensitive financial data, it is vulnerable to cyber-attacks, data breaches, and theft.

Is financial accounting a hard class? Financial accounting, covering basic financial statements, is typically straightforward. Managerial accounting, dealing with cost analysis and budgeting, is also considered relatively easy. However, individual experiences may vary and a class that is considered easy by many, may be difficult for you.

Is QuickBooks a financial system? Intuit QuickBooks is an accounting software package that helps small and medium-sized businesses manage their finances. This program gives you the ability to: Simplify financial processes.

What is the difference between accounting and financial accounting? The main difference between them is that those who work in finance typically focus on planning and directing the financial transactions for an organization, while those who work in accounting focus on recording and reporting on those transactions.

Is accounting harder than finance? Accounting relies on precise arithmetic principles, making it more complex, whereas finance requires a grasp of economics and accounting without as much mathematical detail.

Is financial accounting stressful? It's no secret that many face a lot of accounting stress in our profession. After all, you are responsible for your client's financial well-being and often have to make tough decisions that can impact their bottom line.

Do I need calculus for accounting? While there is a commonly held belief that accounting is all about the complexities of mathematical operations such as calculus and geometry, this is not true. Accountants, instead, mainly work with basic arithmetic, percentages, and some algebraic concepts to complete their professional duties proficiently.

What is the lowest degree in accounting? An undergraduate certificate and associate degree are for entry-level positions, ideal for introducing students to the accounting world. A bachelor's degree is more commonly required by employers seeking a higher level of knowledge in topics like taxation and business finance.

What is the easiest accounting class? Intermediate accounting is a course that is at the professional core level and has many reviews for being one of the easiest accounting courses. Accounting majors must take intermediate accounting I and II. Some students find that Intermediate Accounting II is easier after taking Intermediate Accounting I.

What is the hardest topic in financial accounting? Pension, bond and stockholder equity problems have been cited as among FAR's most difficult. Similarly, familiarity with Securities Exchange Commission (SEC) reporting requirements will be required for Forms 10-K and 10-Q.

What is computerized accounting? What is Computerised Accounting? The computerised accounting system is an accounting data system that processes the financial transactions and transactions as per GAAP (Generally Accepted Accounting Principles) to produce reports as per user demands.

What is the difference between computerized accounting and bookkeeping? Bookkeeping is the process of recording, storing, and retrieving financial

A MARRIAGE PREPARATION INVENTORY FOCUS ON THE FAMILY

transactions, while accounting is the system used to analyze, interpret and report those transactions. While bookkeeping can be done manually, most businesses now use computerized systems to keep track of their finances.

What is the difference between accounting and bookkeeping? Bookkeeping involves recording financial transactions, while accounting interprets, analyzes, and reports these transactions. Bookkeeping is the foundation of accounting, focusing on day-to-day activities, while accounting has a broader scope and prepares financial statements.

Which software is commonly used for computerized accounting? Tally is a popular software among small businesses and accountants. It has multiple versions of the application to appeal to a wide range of users.

What are the disadvantages of computerized accounting? Disadvantage: Technical Issues You may be completing year-end data for your accountant and experience a power outage. Computers might acquire a virus and fail. There is also the potential of users incorrectly performing software tasks that they are not familiar with.

Is computerized accounting better than manual accounting? Chances of errors – Though a computerized accounting system is more accurate than a manual accounting method still there is potential for errors due to input errors, software bugs, or system malfunctions.

How hard is a financial accounting course? Accounting is a complex field with a lot of intricacies, but the foundational concepts should be fairly easy to pick up for most students. Again, it takes a good eye for detail to become an accountant and even your Introduction to Accounting class shouldn't be a walk in the park.

How hard is accounting class in college? Rigorous Coursework Accounting is often considered to be one of the most intense college majors there is. Students are required to take very rigorous courses in a number of different subjects. In addition, the core coursework required in accounting can be daunting and takes much studying and preparation.

Is financial accounting harder than accounting? Is finance harder than accounting? Accounting relies on precise arithmetic principles, making it more complex, whereas finance requires a grasp of economics and accounting without as much mathematical detail.

How hard is finance and accounting degree? Is an accounting and finance degree hard? Despite what many people say, a degree in accounting and finance is no more or less difficult than other subjects. A lot of people assume it is a hard degree just because it requires working with numbers! Like any other course, it involves a lot of work and study.

What is the toughest accounting course? Chartered Accountancy is one of the most respected and rewarding professions, but it is also the toughest bachelor's degree in the world. If you're aiming to pursue this hardest subject in the world, then you must have a deeper understanding of tax laws and auditing standards.

What is the hardest financial course? Chartered Financial Analyst (CFA) The CFA designation is reputed to be the most difficult certification to obtain, which works to the benefit of those who succeed. The focus of the program is on investment analysis and portfolio management.

Is financial accounting stressful? It's no secret that many face a lot of accounting stress in our profession. After all, you are responsible for your client's financial well-being and often have to make tough decisions that can impact their bottom line.

Is computerized accounting hard? No special skills are needed to learn computerized accounting. What is required is the ability to read and understand technical instructions and good analytical skills. Some people with backgrounds in finance or business might have an easier time learning some of the more complicated tasks.

Is accounting hard if you're bad at math? Expertise in mathematics is not required to succeed as a bookkeeper or an accountant. What is needed, however, is the confidence and ability to be able to add, subtract, multiply, divide as well as use decimals, fractions and percentages.

How do I pass my accounting class? I recommend a process that includes twelve steps: (1) know what the professor expects, (2) be your own teacher, (3) work hard from the first day, (4) attend every class, (5) take good notes, (6) participate in class, (7) read the textbook several times, (8) look for patterns, (9) do the homework, (10) study with a ...

Which pays more, finance or accounting? Accounting and Finance Degree Salary
The National Association of Colleges and Employers conducted an analysis and determined that the average annual salary for accounting degrees in the United States is generally around \$57,511, and the average annual salary for finance degrees is \$58,464.

Is finance hard if you're bad at math? One thing to consider when choosing to study finance is that much of what you study during your degree program will include a mix of economics and accounting, which is naturally going to require at least some math, so if you absolutely detest math, then this may not be the right degree for you.

Which accounting is the most difficult?

Is there a lot of math in accounting and finance? When pursuing a career in accounting, having a solid foundation in mathematics is essential. Accounting is a field that requires a keen understanding of numbers, calculations, and financial analysis. It can be challenging to excel in this profession without a solid grasp of mathematical concepts.

Is accounting harder than banking? At the undergraduate level, many people consider accounting to be a more difficult degree. Once you move further up from that level, however, there isn't a huge amount of difference between the two. They are both difficult but in different ways.

What is the best degree for an accountant? PhD or DBA in Accounting Degree
These two degrees take a good amount of work—around four to five years—to complete and are considered a big accomplishment for accountants. Although they are both doctoral degrees, A DBA is a professional degree, and a PhD is an academic one.
