## **Solving Linear Equations: Answers by Milliken Publishing Company**

### **Introduction**

Linear equations are algebraic expressions that represent a straight line on a graph. Solving linear equations involves finding the value of the variable that makes the equation true. Milliken Publishing Company provides comprehensive resources to assist students in understanding and solving linear equations.

## Types of Linear Equations

There are two main types of linear equations:

- **One-step equations:** Equations that can be solved with a single operation, such as addition, subtraction, multiplication, or division.
- **Two-step equations:** Equations that require two operations to solve, typically involving combining like terms and isolating the variable.

## Solving One-Step Equations

To solve a one-step equation, simply perform the operation indicated by the equal sign. For example, to solve " $x + 5 = 10$ ", subtract 5 from both sides to get " $x = 5$ ".

## Solving Two-Step Equations

To solve a two-step equation, follow these steps:

1. Combine like terms on both sides of the equation.
2. Isolate the variable by performing the inverse operation of the one that is multiplying it.

For example, to solve " $3x - 8 = 2$ ", add 8 to both sides and then divide both sides by 3 to get " $x = 3.33$ ".

## Example Problems

**Question:** Solve for  $x$ :  $2x + 10 = 16$

**Answer:**

1. Subtract 10 from both sides:  $2x = 6$
2. Divide both sides by 2:  $x = 3$

**Question:** Solve for y:  $5y - 12 = 3y + 10$

**Answer:**

1. Combine like terms:  $5y - 3y = 10 + 12$
2. Simplify:  $2y = 22$
3. Divide both sides by 2:  $y = 11$

## Conclusion

Milliken Publishing Company's resources provide valuable guidance for solving linear equations. Understanding the types of linear equations and following the appropriate steps can help students develop strong problem-solving skills and achieve success in mathematics.
