Who makes farm chemicals?

What is Agchem? Agricultural Chemicals, or “Ag-Chem,” is a generic term for the various chemical products used in agriculture.

What kind of chemical do farmers use? The two main categories of chemicals used in crop agriculture are: Fertilisers. Pesticides, including insecticides, herbicides, and fungicides.

How do you handle agricultural chemicals? Follow the manufacturer's instructions on the label. Always wear recommended protective clothing such as chemical-resistant gloves, overalls, goggles and appropriate P2 facemasks or a P3 respirator. (Respirator cartridges should provide multi-level gas protection.) Avoid exposing non-target animals or plants.

What is the Syngenta controversy? When Syngenta's own internal research showed adverse effects of paraquat on brain tissue, the company withheld that information from regulators while downplaying the validity of similar findings being reported by independent scientists.

What is the world's number one fungicide? Syngenta Amistar Top Fungicide (200 g/L Azoxystrobin + 125 g/L Difenoconazole)

When did Agco buy Ag-Chem? 2001. AGCO acquires Ag-Chem Equipment Co., Inc., a leading manufacturer and distributor of specialized off-road heavy equipment for agricultural and industrial applications, providing AGCO a leading position in the self-propelled sprayer market.

Who is the owner of Ag-Chem Solutions? An entrepreneur based in Indianapolis, Indiana, John Huntzinger is the founder and owner of Agricultural Chemical Solutions, Inc., the largest privately owned pesticide company supplying corn and soybean farmers in the United States.

Are terragators still made? Beginning with the 1253, Ag-Chem elected to change the model name from Ag-Gator to TerraGator, which is still in use today. In all models succeeding the 1253, the last digit represents the number of wheels on the chassis.

What do farmers spray on fields that smell? Chemical sprays such as herbicides etc stink of, well, chemicals, while animal slurry (fertiliser) stinks of slurry.

What can farmers use instead of chemicals?

What toxic chemicals are on farms? These include herbicides, insecticides, and fungicides. Any exposure to pesticides, regardless of the amount or duration, can result in poisoning as well as short-term and long-term health challenges.

What are 3 agricultural chemicals? This chapter covers the toxicologic pathology profiles of four major classes of agricultural chemicals: herbicides, fungicides, insecticides, and rodenticides.

What is MSDS in agriculture? The MSDS is an easy reference for information on hazardous substances. The MSDS must be "readily accessible" to workers exposed to hazardous substances. The distribution of MSDS is required on farms with eleven or more (full or part time) employees.

What precautions should a farmer take when spraying chemicals?

Is Syngenta owned by China? While Syngenta's headquarters are in Switzerland, it is a subsidiary of China National Chemical, a "state-owned enterprise known as ChemChina. . . . The company has faced mounting roadblocks to its business in the U.S. . . ."

What are the bad pesticide companies? The investigation identified billions of dollars of income for agrochemical giants BASF, Bayer, Corteva, FMC and Syngenta

from chemicals found by regulatory authorities to pose health hazards like cancer or reproductive failure.

Who bought out Syngenta? Syngenta is part of the Syngenta Group, entirely owned by Sinochem, a Chinese state-owned enterprise. Syngenta was founded in 2000 by the merger of the agrichemical businesses of Novartis and AstraZeneca, and acquired by China National Chemical Corporation (ChemChina) in 2017.
