### Understanding Earth: Grotzinger 6th Edition

**Question 1: What is the Structure of the Earth? Answer:** The Earth consists of three main layers: the crust, the mantle, and the core. The crust is the solid, outermost layer, while the mantle is the thick, plastic layer beneath it. The core is the central, metallic layer that generates the Earth's magnetic field.

**Question 2: What are Plate Tectonics? Answer:** Plate tectonics is the theory that the Earth's crust is made up of several large plates that move slowly over the mantle. These plates interact with each other at plate boundaries, forming mountains, volcanoes, and earthquakes.

**Question 3: What is the Water Cycle? Answer:** The water cycle is the continuous movement of water on, above, and below the surface of the Earth. Water evaporates from the ocean, condenses into clouds, and falls as precipitation. It then seeps into the ground or flows back into the ocean, completing the cycle.

**Question 4: What is the Carbon Cycle? Answer:** The carbon cycle is the continuous movement of carbon through the Earth's atmosphere, oceans, and living organisms. Carbon dioxide is released into the atmosphere by respiration and combustion, absorbed by plants during photosynthesis, and stored in the ocean and rocks.

**Question 5: What are the Environmental Challenges Facing the Earth? Answer:** The Earth is facing several environmental challenges, including climate change, pollution, and resource depletion. Climate change is caused by increasing greenhouse gas emissions, which raise global temperatures and disrupt the climate system. Pollution can damage ecosystems and harm human health. Resource depletion is a concern as we continue to use up Earth's limited resources.
