What is the difference between real analysis and probability theory? In real analysis we deal with "measurable functions", in probability theory we deal with "random variables". In probability theory random variables induce "distributions", while in real analysis they are more naturally called "push-forwards".

What are the three theories of probability? Mutually exclusive events: Events that cannot take place at the same time are mutually exclusive events. Equally likely events: Two or more events that have the same chance of occurring are known as equally likely events. Exhaustive events: An exhaustive event is one that is equal to the sample space of an experiment.

Is probability theory pure math? Probability is a part of pure mathematics, though of course it also has extremely significant applications in applied math, or even outside of mathematics (e.g. in economics, finance, etc). Both can be true at the same time.
