Biochemical engineering deals with creating chemical that are for things such as medical research, pharmaceuticals and genetic experimentation. The two fields are closely related to one another.

**What do you mean by biochemical engineering?** Biochemical engineers design ways of getting cells to do make or do what they need them to, and then to obtain the product in a way that is useful. The cells could be from animals, bacteria or single-celled animals like algae, each type needs to be treated in a different way to get them to do what is needed.

**Who is the godfather of chemical engineering?** George Edward Davis (1850–1907) is regarded as the founding father of the discipline of chemical engineering.

This day commemorates the birth of the first engineer Sir Mokshagundam Visvesvaraya, also known as the Father of Engineering. The general celebration offers recognition to all the civil engineers for their contributions

to the nation's development.

**Who is a famous bioengineer?** Some notable figures in the history of biomedical engineering and their contributions include: Forrest Bird (mechanical ventilator). John Charnley (artificial hip replacement). Graeme Clarke (cochlear implant).
