Student Exploration: pH Analysis Gizmo Answer Key

Paragraph 1: Introduction

The Student Exploration: pH Analysis Gizmo is an interactive simulation that allows students to investigate the relationship between pH and the concentration of hydrogen ions (H^+) in a solution. The Gizmo features a variety of tools and measurements that students can use to analyze pH, including a pH meter, a colorimeter, and a titration apparatus.

Paragraph 2: Question 1

Question: What is the pH of a solution with a $[H^+]$ concentration of 0.01 M?

Answer: A solution with a $[H^+]$ concentration of 0.01 M has a pH of 2. This is because pH is defined as the negative logarithm of the $[H^+]$ concentration. Therefore, $pH = -\log[H^+] = -\log(0.01) = 2$.

Paragraph 3: Question 2

Question: What happens to the pH of a solution if you add more acid to it?

Answer: If you add more acid to a solution, the $[H^+]$ concentration will increase. This will cause the pH to decrease, making the solution more acidic. For example, if you add 0.1 mL of 0.1 M HCl to 10 mL of pure water (which has a pH of 7), the pH will drop to approximately 6.9.

Paragraph 4: Question 3

Question: What is the relationship between the color of a solution and its pH?

Answer: The color of a solution can be used to estimate its pH using a pH indicator. pH indicators are weak acids or bases that change color depending on the pH of the solution. For example, phenolphthalein is an indicator that turns pink in basic solutions ($\text{pH} > 7$) and colorless in acidic solutions ($\text{pH} < 7$).

Paragraph 5: Question 4

Question: How can you use a titration to determine the concentration of an unknown acid?

Answer: A titration is a procedure used to determine the concentration of an unknown solution by reacting it with a known solution. In the case of an unknown acid, a base of known concentration is added to the unknown acid until the endpoint is reached. The equivalence point, where the moles of acid and base are equal, is typically indicated by a change in color using a pH indicator. The concentration of the unknown acid can then be calculated using the volume of base added and the stoichiometry of the reaction.
