Will running rich hurt my engine? An engine running rich is burning too much fuel in relation to the amount of air it takes in. As a result, the air-to-fuel ratio is off, with too much fuel and not enough air. This can cause several problems, including decreased fuel economy, increased emissions, and engine damage.

How do I know if my engine is running rich?

Does a rich engine backfire? A mixture of air and fuel that's got too much gas in it is called, "rich." When a rich air/fuel mixture is ignited in the cylinder, the whole mixture won't be burned up by the time the exhaust valves open. Then, the combustion process will flow to the exhaust where a backfire will take place.
