Understanding Sight Reduction Tables Volume 1 (PUB 229)

Q1: What are Sight Reduction Tables (SRTs)? A1: SRTs are a set of mathematical tables used in celestial navigation to calculate the position of a ship or aircraft using the positions of celestial bodies. Sight Reduction Tables Volume 1 (PUB 229) is the first volume of a two-volume set published by the United States National Geospatial-Intelligence Agency (NGA).

Q2: What functions are performed using SRTs Volume 1? A2: SRTs Volume 1 contains tables for reducing observations of selected stars, the Sun, the Moon, and the planets to obtain time and latitude using the LENZ method. Additionally, it provides tables for determining the local hour angle and altitude of the observed celestial bodies.

Q3: How are SRTs Volume 1 used in practice? A3: After taking an observation of a celestial body, a navigator uses the SRTs to compute the Greenwich Hour Angle (GHA) at the time of observation. This GHA is then used to calculate the time and latitude of the ship or aircraft. The navigator also uses the SRTs to obtain the altitude of the observed celestial body.

Q4: What is the LENZ method used for? A4: The LENZ method is a simplified technique for reducing celestial observations to obtain time and latitude. It involves using the Altitude Intercept (AI) tables found in SRTs Volume 1. The AI tables provide a correction to the observed altitude of the celestial body, which can be applied to the calculated hour angle to obtain the GHA.

Q5: Where can SRTs Volume 1 be obtained? A5: SRTs Volume 1 (PUB 229) is published by the NGA and can be purchased from authorized distributors or online at the NGA's website. It is an invaluable tool for celestial navigators who rely on the accuracy and reliability of celestial observations to determine their position.
