Accounting Information System (AIS) Class 12**

Meaning of AIS: An Accounting Information System (AIS) is a framework or process that captures, processes, stores, and reports financial and operational data for an organization.

Key Components:

- ***Data:** Financial and operational transactions and events
- ***Procedures:** Processes and instructions for recording, classifying, and summarizing data
- **People:** Accountants, managers, and other users who interact with the system
- **Technology:** Software, hardware, and networks that support the system

What is Accounting Information? Accounting information refers to organized, processed, and summarized financial and operational data that provides insights into an organization's financial health, performance, and operations.

Use of Accounting Information:

- Decision-making by managers, investors, and other stakeholders
- Compliance with legal and regulatory requirements
- Planning and control of business operations
- Assessment of financial performance and risk management

Types of AIS:

- **Manual AIS:** Data is recorded manually using ledgers, journals, and other paper documents.
- **Computerized AIS:** Data is captured and processed using accounting software and databases.
- **Integrated AIS:** Combines financial and operational data from different departments and sources.

Difference between AIS and MIS:

- **Scope:** AIS focuses on financial data, while MIS encompasses both financial and operational data.
- **Purpose:** AIS supports financial reporting and decision-making, while MIS provides information for broader operational and strategic purposes.

Three Basic Functions of AIS:

- **Data Capture:** Recording and collecting financial and operational transactions.
- **Data Processing:** Classifying, summarizing, and analyzing data to generate meaningful information.
- **Data Reporting:** Disseminating information in the form of financial statements, reports, and other documents.

Why We Use AIS:

- Improves data accuracy and efficiency
- Enhances decision-making
- Facilitates compliance and risk management
- Provides timely and relevant information to stakeholders

Difference between Accounting and AIS:

- **Scope:** Accounting focuses on the principles and practices of financial reporting, while AIS refers to the system used to capture and process financial data.
- **Focus:** Accounting emphasizes the preparation of financial statements, while AIS supports the broader process of collecting, processing, and reporting financial information.

MIS in Accounting Class 12: In accounting class 12, MIS (Management Information System) is introduced as an extension of AIS. It provides information that is essential for planning, controlling, and evaluating the overall operations of an organization.

Types of AIS and Their Functions:

- **Transaction Processing System (TPS):** Captures and processes daily financial transactions.
- **Management Reporting System (MRS):** Generates reports and summaries for management decision-making.
- **Financial Reporting System (FRS):** Prepares financial statements for external reporting.
- **Audit Trail System (ATS):** Provides a chronological record of financial transactions for auditing and accountability purposes.

These strategies include the following: (i) discovery of novel antibiotics by modification of existing antibiotics, screening of small-molecule libraries, or exploration of peculiar places; (ii) improvement in the efficacy of existing antibiotics through metabolic stimulation or by loading a novel, more efficient ...

What questions should be considered when a patient is prescribed an antimicrobial? If a client is prescribed an antimicrobial, the nursing assessment should include looking for signs and symptoms of infection. The nurse should always know WHY the client is receiving an antimicrobial in order to evaluate if the treatment is resulting in the client improving or deteriorating.

What is an example of antimicrobial therapy? What are examples of antimicrobials? Scientists have invented many antimicrobials – medications that treat illnesses caused by microbes. A very short list includes: Penicillin (an antibiotic).

What is the strongest antibiotic for bacterial infection? Vancomycin is used to treat serious bacterial infections. It is an antibiotic that works by stopping the growth of bacteria.

What antibiotic kills all infections? There is no one type of antibiotic that cures every infection. Antibiotics specifically treat infections caused by bacteria, such as Staph., Strep., or E. coli., and either kill the bacteria (bactericidal) or keep it from reproducing and growing (bacteriostatic). Antibiotics do not work against any viral infection.

Can I get an antibiotic without seeing a doctor? Many healthcare providers see telemedicine as a low-risk option for certain routine treatments. In many cases, you can get routine medications or antibiotics without seeing a provider in person. This is especially true if you have conditions that are not severe, like: Acne.

How can you tell which antibiotic is most effective? There are different antibiotics, and each one only works well against certain types of bacteria or fungi. An antibiotic sensitivity test can help find out which antibiotic will be most effective in treating your infection. The test can also help find a treatment for antibiotic-resistant infections.

Does GoodRx work for antibiotics? You do not need to visit a provider's office to be prescribed antibiotics for a urinary tract infection (UTI). Instead, you can speak with a provider online from the comfort of your home, which can help you start treatment sooner, if appropriate. GoodRx Care offers online visits for UTI prescriptions for as low as \$39.
