The Man Who Lied to His Laptop: What We Can Learn About Ourselves from Our Machines

By Clifford Nass

In his groundbreaking book, "The Man Who Lied to His Laptop," psychologist Clifford Nass delves into the fascinating relationship between humans and their machines. Nass argues that our interactions with technology shape our perceptions of ourselves and the world around us. Through extensive research, he explores the ways in which our laptops and other devices can influence our thoughts, feelings, and behaviors.

1. Can our machines make us more dishonest? Nass's research suggests that yes, our machines can make us more dishonest. In one study, participants were asked to answer a series of questions about their online behavior. When they were using a computer or tablet, they were more likely to lie about their behaviors than when they were answering the same questions on paper. Nass attributes this to the anonymity and perceived lack of accountability that technology provides.

2. Do our machines make us more or less social? According to Nass, our machines can both make us more and less social. On the one hand, social media platforms can connect us with friends and family around the world. On the other hand, excessive use of technology can lead to social isolation and loneliness. Nass emphasizes the importance of balancing our online and offline interactions for well-

being.

3. Can our machines make us more efficient? Nass acknowledges that technology can enhance our efficiency in certain tasks. However, he cautions that it can also lead to multitasking and overstimulation, which can impair our ability to focus and complete tasks effectively. Nass suggests that we prioritize the most important tasks and use technology as a tool to support our efforts rather than as a distraction.

4. How do our machines affect our sense of identity? Nass argues that our machines can influence our sense of identity through the way they shape our interactions with others and our perception of ourselves. For example, social media platforms can create a sense of belonging and validation, but they can also lead to self-comparison and negative self-esteem. Nass encourages us to use technology in a way that supports our positive self-concept rather than undermines it.

5. What can we learn from our machines? Nass believes that our machines can teach us valuable lessons about ourselves. By observing our behaviors and interactions with technology, we can gain insight into our own motivations, values, and vulnerabilities. Nass urges us to reflect on how our use of technology impacts our lives and to make conscious choices about how we interact with our machines.

Toshiba Satellite C660 Repair: Troubleshooting and Solutions

Q: Why won't my Toshiba Satellite C660 turn on? A: Check the power supply by connecting the laptop to a power outlet. If the battery is drained, try charging it for at least 30 minutes. Ensure that the battery is properly seated and that the power button is not stuck.

Q: My Toshiba Satellite C660 is overheating. A: Clean the laptop's fan and vents to remove any dust or debris that could obstruct airflow. Check if the cooling system is functioning properly. If the overheating persists, replace the fan or the heat sink.

Q: The screen on my Toshiba Satellite C660 is flickering. A: First, update the graphics drivers. If the flickering continues, inspect the display cable for any damage or loose connections. Replace the display cable if necessary. In rare cases, the problem may be caused by a faulty graphics card.

Q: My Toshiba Satellite C660 is running slowly. A: Check the laptop's hard drive for any errors or bad sectors using a diagnostic tool. If needed, replace the hard drive. Ensure that there is enough RAM to support your applications. If necessary, upgrade the RAM. Run a virus scan to eliminate any malware that may be slowing down the laptop.

Q: I can't connect to Wi-Fi on my Toshiba Satellite C660. A: Verify that the wireless switch on the laptop is turned on. Ensure that the Wi-Fi driver is installed and up-to-date. If the problem persists, check the router or access point for any issues. Try resetting the network adapter. If all else fails, replace the Wi-Fi card.
