WHO Classification of Tumours of Haematopoietic and Lymphoid Tissues

What is the WHO Classification of Tumours of Haematopoietic and lymphoid tissues?

It is a comprehensive classification system for tumours of the blood, bone marrow, lymph nodes, and other lymphatic tissues. It is published by the World Health Organization (WHO) and provides a standardized approach to diagnosing and classifying these diseases.

Why is it important?

Accurate diagnosis of haematopoietic and lymphoid tumours is crucial for determining appropriate treatment and prognosis. The WHO classification provides a common language and framework for pathologists and clinicians worldwide, ensuring consistency in diagnosis and facilitating research.

How is it structured?

The WHO classification is organized into sections based on the cell of origin of the tumour. It includes detailed descriptions of each tumour type, including morphological criteria, immunophenotypic markers, and genetic abnormalities.

What are the key changes in the latest revision?

The latest revision (5th edition) includes several significant updates, including:

- Expansion of molecular genetic information
- Refinement of diagnostic criteria for some tumours
- Introduction of new entities, such as chronic lymphocytic leukaemia/small lymphocytic lymphoma

How does it impact clinical practice?

The WHO classification guides treatment decisions by providing specific diagnostic criteria for each tumour type. It also facilitates communication between pathologists, oncologists, and other healthcare professionals involved in the management of haematopoietic and lymphoid tumours.
