Statistics Chapter 5: Descriptive Statistics

Answers to Questions:

1. What is descriptive statistics? Descriptive statistics summarize and describe data in a meaningful way. They provide a concise representation of the data's central tendency, variability, and distribution.

2. What are the different measures of central tendency? The three main measures of central tendency are:

- Mean: The average of all values in a dataset.
- Median: The middle value of a dataset when arranged in order from smallest to largest.
- Mode: The value that occurs most frequently in a dataset.

3. What are the different measures of variability? The two most common measures of variability are:

- Range: The difference between the largest and smallest values in a dataset.
- Standard deviation: A measure of how spread out the data is around the mean.

4. What is a histogram? A histogram is a graphical representation of the distribution of a dataset. It shows the frequency of occurrence of different values or ranges of values.
