The goal of all of these techniques is to detect deception by analyzing signals of changes in the body that cannot normally be detected by human observation.

interpret subtle facial expressions; ...

What is the modern method of detecting deception? Deception detection is a multidisciplinary field focused on identifying false or misleading information, employing various techniques. Common methods include polygraph tests, eye-tracking, speech analysis, biometric detection, and emotional response analysis.

What is EyeDetect? What is EyeDetect®? It's a next-generation lie detector that measures slight changes in eye behaviors to detect lies. Get 86-88% accuracy with 30-minute screening tests or 15-minute diagnostic (single-issue) tests.
