

# RESEARCH AND DOCUMENTATION IN THE DIGITAL AGE

## [Download Complete File](#)

**What is documentation in the research process?** Documenting means showing where you got source information that's not your own. Remember, a research paper blends your ideas with ideas and information from other sources. Documentation shows the reader what ideas are yours and what information and ideas you've taken from a source to support your point of view.

**What is the history in the digital age?** As defined by William G. Thomas' article in History in the Digital Age, digital history is as “an approach to examining and representing the past that works with the new communication technologies of the computer, Internet network, and software systems” (Pg.

**What is the digital age in the 21st century?** This is otherwise referred to as the Information Age, a historic period in the 21st century characterized by the rapid shift from traditional industry that the Industrial Revolution brought through industrialization, to an economy based on information technology.

**What is the justification for documentation in research?** Traceability and reproducibility. For reviewing and troubleshooting data collection and analysis, documentation is pivotal. The same goes for reproduction of research results. Documentation about data ("metadata") is essential to verify or falsify results.

**What are the five importances of documentation in research?** Provides attribution or credit to the original author or creator. Allows someone to find the documents you cited on their own. Enables the reader to follow the continuum of research. What important contributions were made before your work and where does your body of research contribute to or add to current knowledge?

## **What are the 4 methods of documentation?**

**How has the digital age changed?** The digital revolution has brought along many immediate (private) benefits such as more accessible communication, access to information, convenience, free digital products, and new entertainment forms. It has also fostered social connectedness and the creation of a global community.

**What is the digital information era?** The Information Age is the idea that access to and the control of information is the defining characteristic of this current era in human civilization. The Information Age -- also called the Computer Age, the Digital Age and the New Media Age -- is coupled tightly with the advent of personal computers.

**What is an example of the new digital age?** Examples include the Internet of Things (IoT), 3D printing of body parts, and self-driving/flying vehicles, as just a few examples. For some period of time this Fourth revolution was referred to as the Information Age.

**Are we living in a digital age?** For a number of reasons, you may not even notice that we are in the middle of a new digital dark age. From Google smart homes to contact-tracing technology, life is increasingly digital. Without an app, internet or social media account, it is difficult to verify your identity and gain access to data – even your own.

**Are we in the digital era now?** Digital technologies are ushering in a new era in development—by transforming economies, creating jobs, and improving the lives of even the most vulnerable and remote populations. They have dramatically changed the way we communicate with each other, how we conduct business, and our interaction with the environment.

**What next after digital age?** Thanks to mobile screens, virtual reality, wearables and the Internet of Things (IoT) advancements, it seems we have shifted into what is being commonly referred to as the experience age. This phase combines not only the digital age but also the experiential age.

**What is documentation in research?** In a report or research paper, documentation is the evidence provided for information and ideas borrowed from others. That

evidence includes both primary sources and secondary sources.

### **How to do research and documentation?**

**Why is documentation so important?** Documentation encourages knowledge sharing, which empowers your team to understand how processes work and what finished projects typically look like.

**What is meant by the documentation process?** Process documentation is the act of capturing or documenting all of the steps in a particular task. Ideally, it should happen in real time. As employees perform a task, they document each step they take.

**What is a documentation example?** It's about creating comprehensive documentation to explain what's needed over the course of the project to execute it properly. Some examples of project documentation include project proposals, project plans, business cases, status reports, and so on.

**What is a documentation style in research methodology?** A documentation style is a standard approach to the citation of sources that the author of a paper has consulted, abstracted, or quoted from. It prescribes methods for citing references within the text, providing a list of works cited at the end of the paper, and even formatting headings and margins.

**What is documentation and why is it important?** Documents can be used for various purposes, such as communication, education, or helping instruct people on how to complete tasks. Documentation is important because it plays a key role in many parts of society, from businesses to government.
