SSD 1 Module 2 Test Answers

Question 1: What is the purpose of a solid-state drive (SSD)?

Answer: An SSD is a data storage device that uses flash memory to store data, offering faster performance and durability than traditional hard disk drives (HDDs).

Question 2: What are the different types of SSDs based on form factor?

Answer: SSDs come in various form factors, including 2.5-inch SATA, M.2, NVMe, and PCIe. Each form factor has its own specifications and advantages in terms of size, performance, and compatibility.

Question 3: What is the difference between SLC, MLC, and TLC NAND flash memory?

Answer: SLC (single-level cell) flash memory stores one bit of data per cell, offering the highest speed and durability. MLC (multi-level cell) flash memory stores two bits of data per cell, providing a balance between performance and affordability. TLC (triple-level cell) flash memory stores three bits of data per cell, offering the highest capacity at the cost of slower performance and reduced lifespan.

Question 4: What is the importance of TRIM and garbage collection in SSDs?

Answer: TRIM is a command that informs the SSD which blocks of data are no longer in use, allowing the drive to optimize its performance by erasing and reclaiming the freed space. Garbage collection is a background process that identifies and consolidates unused data blocks on the SSD, ensuring efficient storage utilization.

Question 5: How can you troubleshoot performance issues with SSDs?

Answer: To troubleshoot SSD performance issues, you can check the drive's health and performance metrics using monitoring tools, verify the correct installation and compatibility of the SSD, and consider updating the firmware or driver to the latest version. If necessary, contact the manufacturer for additional support or a potential replacement.
