Teaching Transparency Master 31: The Activity Series

Question 1: What is an activity series?

Answer: An activity series is a list of elements arranged in order of their reactivity. The more reactive an element, the higher it appears on the series.

Question 2: How do you use an activity series to predict chemical reactions?

Answer: An activity series can be used to predict whether a reaction will occur and which products will be formed. If two elements are on opposite sides of the activity series, they are likely to react and form a product. The more reactive element will displace the less reactive element from its compound.

Question 3: Which element is the most reactive?

Answer: Potassium is the most reactive element on the activity series. It reacts violently with water and even reacts with oxygen in the air.

Question 4: Which element is the least reactive?

Answer: Gold is the least reactive element on the activity series. It does not react with water or oxygen at room temperature and is often used to make jewelry and other objects.

Question 5: How can you use an activity series to understand redox reactions?

Answer: An activity series can be used to understand redox reactions because it shows the relative tendency of elements to gain or lose electrons. The more reactive an element, the more likely it is to lose electrons (oxidize) and the less reactive an element, the more likely it is to gain electrons (reduce).
