Subiectele de Bacalaureat la Informatic? 2009: Teorie ?i Probleme

Subiectele de Bacalaureat la Informatic? din 2009 au prezentat studen?ilor o gam? larg? de concepte teoretice ?i probleme practice, testând atât în?elegerea lor de baz?, cât ?i abilit???ile lor de rezolvare a problemelor.

Partea 1: Teorie (40 de puncte)

- Definiți conceptul de structură de date și dați un exemplu.
- Descrieți rolul algoritmilor în rezolvarea problemelor.
- Explicați diferența dintre limbajele de programare interpretate și cele compilate.
- Identificați avantajele și dezavantajele utilizării bazelor de date.

Partea 2: Probleme (60 de puncte)

Problema 1 (20 de puncte)

Scrieți un program care citește un număr întreg și determină dacă acesta este pozitiv, negativ sau zero.

Problema 2 (20 de puncte)

Implementați o structură de date stivă folosind un tablou și scrieți funcții pentru a adăuga și elimina elemente.

Problema 3 (20 de puncte)

Proiectați o bază de date relațională pentru a stoca informații despre filme, inclusiv titlu, regizor, actori și anul lansării. Scrieți o interogare SQL pentru a selecta toate filmele regizate de un anumit regizor.

Răspunsurile

Partea 1: Teorie

- O structură de date este o modalitate de a organiza și stoca date în computer, cum ar fi un tablou sau o listă.
- Algoritmii sunt proceduri pas cu pas care rezolvă probleme specifice.
- Limbajele de programare interpretate sunt executate linie cu linie, în timp ce limbajele compilate sunt transformate într-un singur program înainte de execuție.
- Avantaje ale bazelor de date: consistență, partajarea datelor, redundanță minimă. Dezavantaje: complexitate, costuri ridicate de întreținere.

Partea 2: Probleme

Problema 1

```
import java.util.Scanner;

public class PositivNegativZero {

    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);
        int number = input.nextInt();

        if (number > 0) {
            System.out.println("Num?rul este pozitiv.");
        } else if (number < 0) {
            System.out.println("Num?rul este negativ.");
        } else {
            System.out.println("Num?rul este zero.");
        }
    }
}
```

Problema 2

```
class Stack {

    private int[] elements;
    private int top;

    public Stack(int size) {
        elements = new int[size];
        top = -1;
    }

    public void push(int element) {
        if (top < elements.length - 1) {
            top++;
            elements[top] = element;
        }
    }
}
```

```

    public int pop() {
        if (top >= 0) {
            int element = elements[top];
            top--;
            return element;
        }
        return -1;
    }
}

```

Problema 3

Schema bazei de date:

- Filme (id, titlu, regizor, actori, an_lansare)

Interogare SQL:

```
SELECT * FROM Filme WHERE regizor = 'Numele regizorului';
```
