SMM7 Standard Method of Measurement of Building Works

The SMM7 Standard Method of Measurement of Building Works is a standardized method for measuring and valuing the work in a construction project. It is widely used in the United Kingdom and other parts of the world.

Q: What is the purpose of SMM7?

A: SMM7 provides a common language for describing and measuring construction work. It allows different parties involved in a project, such as architects, engineers, contractors, and clients, to understand and compare the scope of work and its value.

Q: How is SMM7 used?

A: SMM7 is used to create a bill of quantities (BoQ), which is a detailed list of all the elements of work in a construction project. The BoQ is then used to calculate the cost of the project and to prepare contracts between the different parties.

Q: What are the benefits of using SMM7?

A: SMM7 offers several benefits, including:

- Accuracy and consistency: It provides a standardized method for measuring work, reducing the risk of errors and disputes.
- Transparency: It allows different parties to clearly understand the scope of work and its cost.
- Efficiency: It simplifies the process of creating BoQs and calculating costs.

Q: Who uses SMM7?

A: SMM7 is primarily used by professionals in the construction industry, such as:

- Architects
- Engineers
- Contractors
- Clients
- Quantity surveyors

Q: Where can I find more information about SMM7?

A: The Royal Institution of Chartered Surveyors (RICS) is the custodian of SMM7. More information, including the SMM7 document itself, can be found on the RICS website: <https://www.rics.org/uk/uphold-professional-standards/sector-standards/construction/standard-method-of-measurement/>
