Zoology: Miller & Harley (4th Edition) Chapter 9

Question 1: Explain the difference between direct and indirect development.

Answer: Direct development involves the emergence of offspring that largely resemble the adult form, while indirect development involves significant larval stages that differ morphologically and functionally from adults.

Question 2: Describe the three main types of larval forms in invertebrates.

Answer:

- Planktonic larvae: Free-swimming larvae that feed and grow in the water column.
- Benthic larvae: Bottom-dwelling larvae that crawl or burrow in the substrate.
- Parasitic larvae: Larvae that attach themselves to a host animal and obtain nutrients from its body.

Question 3: Discuss the role of metamorphosis in animal development.

Answer: Metamorphosis is a dramatic transformation that occurs during development, changing the body plan, size, and function of the animal. It allows animals to adapt to different environments and niches at different stages of their life cycle.

Question 4: Explain the concept of indeterminate growth.

Answer: Indeterminate growth is a pattern of growth in which animals continue to grow throughout their lives, with no predetermined adult size. This growth is often

associated with open-ended life cycles and the ability to reproduce at various stages of development.

Question 5: Describe the factors that influence growth and development in animals.

Answer: Growth and development are influenced by a complex interplay of genetic, environmental, and nutritional factors. These factors include temperature, food availability, competition, and the presence or absence of predators. Understanding these factors is essential for managing animal populations and promoting their survival.
