Schrader TPMS Sensor Application Guide

Q: What is a TPMS sensor? A: A Tire Pressure Monitoring System (TPMS) sensor is a device that monitors the tire pressure and temperature. It sends this information wirelessly to a receiver in the vehicle, which then displays it to the driver.

Q: Why are TPMS sensors important? A: TPMS sensors help to ensure that tires are properly inflated. This is important for safety, as underinflated tires can increase the risk of a blowout. TPMS sensors also help to improve fuel efficiency, as properly inflated tires roll more easily.

Q: How do TPMS sensors work? A: TPMS sensors use a combination of sensors and electronics to measure tire pressure and temperature. The sensors are located inside the tire and transmit the data to the receiver in the vehicle.

Q: What are the different types of TPMS sensors? A: There are two main types of TPMS sensors: direct and indirect. Direct TPMS sensors measure tire pressure directly, while indirect TPMS sensors measure tire pressure indirectly by monitoring the tire's speed and rotation.

Q: How do I know if my vehicle has a TPMS? A: Most vehicles manufactured after 2008 are equipped with a TPMS. You can check your vehicle's owner's manual or VIN number to see if it has a TPMS.
