Types of Lines in Engineering Drawing

In engineering drawing, different types of lines are used to convey various types of information. Each line has a specific purpose and conveys a specific meaning.

Q: What is the difference between thick lines and thin lines?

A: Thick lines are used to outline the object being drawn, while thin lines are used for dimensions, center lines, and other details.

Q: What are some of the different types of thin lines?

A: There are several types of thin lines, including:

- **Dimension lines:** Used to indicate the size of an object.
- **Center lines:** Used to indicate the center of an object.
- **Extension lines:** Used to extend a line beyond its endpoint.
- **Hidden lines:** Used to represent features of an object that are hidden from view.

Q: What is the purpose of phantom lines?

A: Phantom lines are used to represent features of an object that are not visible from the current view. They are typically dashed and have a long dash and two short dashes pattern.

Q: What is the difference between solid lines and dashed lines?

A: Solid lines are used to represent visible edges of an object, while dashed lines are used to represent invisible edges. Dash length and spacing may vary depending on the standard being used.
