The Maria Thun Biodynamic Calendar: A Guide to Sustainable Gardening

Q: What is the Maria Thun Biodynamic Calendar? **A:** The Maria Thun Biodynamic Calendar is a guide that helps farmers and gardeners plan their planting, harvesting, and other agricultural tasks based on the celestial cycles. It was created by Austrian biodynamic farmer Maria Thun in the 1950s.

Q: How does the calendar work? **A:** The calendar tracks the positions of the sun, moon, and planets relative to the Earth. These celestial bodies are believed to exert gravitational and electromagnetic influences on plants, animals, and soil. By aligning agricultural activities with these cosmic rhythms, farmers and gardeners aim to promote plant growth, enhance vitality, and reduce disease susceptibility.

Q: What are the different days on the calendar? **A:** The calendar consists of four main types of days:

- **Root days:** Favor planting and harvesting root crops (e.g., carrots, potatoes).
- **Leaf days:** Support leafy plants (e.g., lettuce, spinach).
- **Flower days:** Ideal for planting and harvesting flowers and herbs.
- **Fruit days:** Best for planting and harvesting fruits (e.g., apples, tomatoes).

Q: How do I use the calendar? **A:** To use the calendar, simply consult it to determine the best days for specific tasks. For example, if you want to plant tomatoes, choose a fruit day. Additionally, the calendar provides specific instructions

for each day, such as avoiding pruning on root days.

Q: Is there any scientific evidence to support the calendar? **A:** While the scientific validity of the Maria Thun Biodynamic Calendar is still being debated, many farmers and gardeners report positive results from using it. They attribute increased yields, improved plant health, and reduced pest problems to the calendar's guidance. However, some research has failed to find consistent evidence to support its claims.
