Abnormal Child Psychology: A Comprehensive Guide**

What is Abnormal Child Psychology?

Abnormal child psychology is the study of children who exhibit behaviors or mental processes that deviate significantly from what is considered typical for their age and developmental stage. It investigates the causes, symptoms, and treatments for mental disorders in children.

What is Child Psychology APA?

The American Psychological Association (APA) defines child psychology as the study of the cognitive, emotional, social, and physical development of children from birth to adolescence. It encompasses the study of normal and exceptional development, as well as child psychopathology.

What is Abnormal Child Behavior?

Abnormal child behavior refers to behaviors that are significantly different from those expected of children of a similar age. These behaviors may include excessive tantrums, difficulty controlling emotions, social withdrawal, or aggression.

Concept of Abnormal Psychology

Abnormal psychology explores the nature of psychopathology, or mental disorders. It investigates the causes, symptoms, diagnosis, and treatment of mental health conditions, focusing on individuals who meet criteria for a recognized mental disorder.

Child Psychology

Child psychology is a specialized field of psychology that focuses on the psychological development and well-being of children. It covers topics such as cognitive development, social-emotional development, parenting, and child psychopathology.

Father of Child Psychology

Jean Piaget is considered the father of child psychology. His research on cognitive development laid the foundation for understanding how children learn and process information.

Clinical Psychology vs. Child Psychology

Clinical psychology is a broad field that deals with the assessment, diagnosis, and treatment of mental health conditions in all populations, including children. Child psychology is a specialized area of clinical psychology that focuses primarily on children.

Abnormal Child

An abnormal child is a child who exhibits behaviors, thoughts, or emotions that significantly deviate from what is considered typical for their age and developmental stage. These deviations may cause significant distress or impairment in their daily functioning.
