The Self-Regulation Questionnaire (SRQ) About CASA

Introduction

The Self-Regulation Questionnaire (SRQ) is a widely used assessment tool for measuring self-regulation abilities in children and adolescents. It has been adapted for use in the context of the Child and Adolescent Service Assessment and Planning System (CASAA). The SRQ-CASAA is designed to assess self-regulation skills in the areas of attention, control, and flexibility.

Purpose

The SRQ-CASAA is used to evaluate a child's or adolescent's self-regulation abilities in order to inform treatment planning and intervention strategies. It can help identify areas of strength and weakness in self-regulation, such as difficulty maintaining attention, controlling impulses, or adapting to changes.

Question and Answer Format

The SRQ-CASAA consists of 25 items, each of which is rated on a 4-point scale from "Never" to "Always." The questions cover aspects of attention, control, and flexibility. Examples of questions include:

- "How often does your child have trouble paying attention when others are talking to him/her?"
- "How often does your child get upset easily?"
- "How often does your child have difficulty waiting his/her turn?"

Scoring

The SRQ-CASAA is scored by summing the ratings for each item, with higher scores indicating greater difficulties with self-regulation. Scores can be categorized as

follows:

- **Normal:** 0-5
- **Mild difficulties:** 6-10
- **Moderate difficulties:** 11-15
- **Severe difficulties:** 16+

Clinical Applications

The SRQ-CASAA is a valuable tool for clinicians working with children and adolescents with self-regulation difficulties. It can be used to:

- Diagnose and assess self-regulation problems
- Develop individualized treatment plans
- Monitor progress over time
- Evaluate the effectiveness of interventions
