Understanding the Acronym "UVECE CIS": Questions and Answers

What is UVECE CIS?

UVECE CIS stands for "Ultraviolet Emission Cross Section Database for Atmospheric Constituents and Impacts on Stratosphere-Climate Interaction." It is a comprehensive database that provides information on the ultraviolet (UV) absorption cross sections of various atmospheric constituents.

What are UV absorption cross sections?

UV absorption cross sections are quantitative measures of the interaction between UV radiation and atmospheric gases. They describe the probability that a gas molecule will absorb a certain wavelength of UV light.

Why are UV absorption cross sections important?

UV absorption cross sections are crucial for understanding the behavior of the atmosphere. They play a key role in atmospheric modeling, radiative transfer calculations, and quantifying the impacts of atmospheric gases on the transmission of UV radiation.

What types of atmospheric constituents are included in UVECE CIS?

UVECE CIS provides data for a wide range of atmospheric constituents, including ozone, nitrogen oxides, halogens, and various hydrocarbons. These constituents are responsible for absorbing UV radiation in different ways, influencing the overall UV radiation budget of the atmosphere.

How can UVECE CIS be accessed and used?

UVECE CIS is freely available through the internet. Users can download the database and utilize the data for scientific research, atmospheric modeling, and

educational purposes. The data can be used to investigate atmospheric processes, quantify the effects of human activities on the atmosphere, and develop strategies for environmental protection.
