Strategy and Game Theory Practice Exercises with Answers: A Valuable Resource for Students

Springer Texts in Business and Economics offers a comprehensive collection of exercises and answers designed to enhance students' understanding of strategy and game theory concepts. These exercises provide an invaluable opportunity to apply theoretical knowledge to practical scenarios and develop critical thinking skills.

Question:

Consider a two-player game where Player A can choose between actions "Cooperate" and "Defect," and Player B can choose between actions "Cooperate" and "Cheat." The payoff matrix is as follows:

Player B Cooperate Cheat

Player A Cooperate (3,3)

Defec (5,0) (1,1)

What is the Nash equilibrium of this game?

Answer:

The Nash equilibrium is (Defect, Cheat). To see why, consider Player A's choices: if Player B cooperates, Player A is better off defecting to get a payoff of 5. If Player B cheats, Player A is still better off defecting to get a payoff of 1. Therefore, Player A will always defect. Given that Player A will defect, Player B's best choice is to cheat to get a payoff of 1.

Question:

A company is considering launching a new product. The company estimates that the product will generate a profit of \$10 million if it is successful and a loss of \$5 million if it fails. The probability of success is 60%. Should the company launch the product?

Answer:

Yes, the company should launch the product. The expected profit of the product is:

$$(0.6 \text{ } \$10 \text{ million}) + (0.4 \text{ } -\$5 \text{ million}) = \$4 \text{ million}$$

Since the expected profit is positive, the company should launch the product.

Question:

Two firms compete in a market with two products. Firm A can choose to produce either a high-quality or low-quality product, and Firm B can do the same. The payoffs are as follows:

	Firm B	High-Quality	Low-Quality
Firm A		High-Quality	(2,2)
	Low-Quality	(3,0)	(1,1)

What is the dominant strategy for each firm?

Answer:

The dominant strategy for both firms is to produce a low-quality product. To see why, consider Firm A's choices: if Firm B produces a high-quality product, Firm A is better off producing a low-quality product to get a payoff of 3. If Firm B produces a low-quality product, Firm A is still better off producing a low-quality product to get a payoff of 1. Therefore, Firm A will always produce a low-quality product. Given that Firm A will produce a low-quality product, Firm B's best choice is to produce a low-quality product to get a payoff of 1.

Question:

A group of students is playing a game where each student can choose to study or not study for a test. The payoffs are as follows:

Other Students Study Not Study

Study	(2,2)	(0,1)
Not Study	(1,0)	(1,1)

If all other students study, what is the best choice for a single student? If all other students do not study, what is the best choice for a single student?

Answer:

If all other students study, the best choice for a single student is to study to get a payoff of 2. If all other students do not study, the best choice for a single student is to not study to get a payoff of 1.

Conclusion:

The practice exercises and answers in Springer Texts in Business and Economics provide a valuable tool for students to develop their understanding of strategy and game theory concepts. By working through these exercises, students can apply their knowledge to real-world scenarios, identify Nash equilibria, analyze dominant strategies, and make informed decisions in competitive environments.
