**What was the last year Suzuki made the Burgman 650?** AN650 Burgman 650 - is a maxi-scooter that was produced from 2003 to 2018. It is powered by a 638cc parallel-twin engine that produces 54 horsepower and 46 lb-ft of torque.

**How many quarts of oil does a Burgman 650 take?** Viscosity: SAE 10W-40. Capacity: 2.8L (3 qt) (When filter is not removed.) 2.9L (3.1 qt) (When filter is removed.)

**How fast can suzuki burgman 650 go?** Overall rating. The biggest maxi-scooter in the two wheeled world (when it was launched), the Suzuki Burgman 650 was really a mid sized touring motorcycle under its plastic panels, with a punchy 638cc twin cylinder motor making a claimed 54bhp. That's enough to send the 650 'Burgervan' to about 110mph.

**What is the gas mileage on a Suzuki Burgman 650?** Don't expect 60 plus mpg. In several hundred miles the 650 averaged about 53 mpg.

**Why was the Burgman 650 discontinued?** The slow-selling Suzuki Burgman could be replaced with a new 'urban mobility' model in the coming months as the manufacturer looks to phase the scooter out in the face of tightening emissions regulations.

**How many miles will a Burgman 650 last?** I think a Burgy could easily go for 200-300k miles before any major surgery is required. A couple of people on the board have reached the 60-75k miles. If anything, you will probably want something else before the Burgy wears out... A 2006 should be a safe bet even if it has very few

miles on it...

## **The Freedom Writers Diary: Erin Gruwell and the Impact of Education**

### **Paragraph 1:**

Erin Gruwell was a dedicated teacher who taught at Woodrow Wilson High School in Long Beach, California. In 1994, she was assigned to teach a class of students who were considered "unteachable" due to their low academic performance and behavioral issues. However, Gruwell refused to give up on them and instead created an innovative classroom that fostered a sense of belonging and empowerment.

### **Paragraph 2:**

**Question:** What was Erin Gruwell's goal for her classroom? **Answer:** To create a space where students felt valued, respected, and inspired to learn.

### **Paragraph 3:**

One of the key elements of Gruwell's approach was the use of writing. She encouraged her students to keep journals where they could express their thoughts and feelings. These journals became known as "The Freedom Writers Diaries." Through their writing, the students explored themes such as race, identity, and social justice.

### **Paragraph 4:**

**Question:** How did the students in Erin Gruwell's class benefit from writing in their journals? **Answer:** Writing helped them to process their experiences, develop their voices, and connect with each other on a deeper level.

### **Paragraph 5:**

The Freedom Writers Diary became a testament to the transformative power of education. Gruwell's students went on to achieve academic success and make a

positive impact on their communities. The story of their journey has been shared through the book "The Freedom Writers Diary" and a film adaptation.

**Question:** What is the legacy of The Freedom Writers Diary? **Answer:** It continues to inspire educators and students alike, proving that even in challenging circumstances, the power of education can overcome adversity and empower individuals to reach their full potential.

### **UH-60 Black Hawk Pilot Flight Training: Engine, Electrical, Fuel System, Instrument, and Crew Functions**

**Question 1: What are the key components of the UH-60 Black Hawk's engine system?**

**Answer:** The UH-60's engine system comprises two General Electric T700-GE-701C turboshaft engines, each providing approximately 2,000 shaft horsepower. These engines drive the main and tail rotors, providing the helicopter with lift, thrust, and maneuverability.

**Question 2: Describe the electrical system of the UH-60.**

**Answer:** The electrical system consists of four generators, two batteries, and a distribution bus. The generators supply power to the aircraft's systems and equipment, while the batteries provide backup power in the event of a generator failure. The distribution bus routes electrical power to the various systems and components.

**Question 3: How is fuel managed in the UH-60?**

**Answer:** The fuel system includes two main fuel tanks, two auxiliary fuel tanks, and a fuel control unit. The fuel control unit manages fuel flow to the engines, ensures proper fuel-air mixture, and protects against fuel starvation.

**Question 4: Explain the crew functions in the UH-60.**

**Answer:** The UH-60 is typically flown by a pilot and a co-pilot. The pilot is responsible for controlling the aircraft's flight, while the co-pilot assists in navigation, communications, and other tasks. Both pilots receive comprehensive training in

engine, electrical, fuel system, and instrument operations.

**Question 5: What visual training materials are used for UH-60 flight training?**

**Answer:** A variety of visual training materials are employed, including flight simulators, mock-ups, and computer-aided programs. Simulators provide a realistic environment for practicing flight procedures, handling emergencies, and honing piloting skills. Mock-ups and instructional materials allow students to familiarize themselves with the aircraft's components and systems.

**The Intel Microprocessors: Architecture, Programming, and Interfacing**

The Intel microprocessors have played a dominant role in the personal computing industry for over three decades. These processors have evolved from the 8-bit 8086 to the 64-bit Pentium Pro, each offering significant improvements in performance and capabilities.

**Questions and Answers**

**Q: What are the key architectural features of the Intel microprocessors?** A: The Intel microprocessors feature a RISC-like design with a von Neumann architecture, allowing for both data and instructions to be stored in the same memory space. They also incorporate pipelining and branch prediction techniques to enhance performance.

**Q: How do the Intel microprocessors differ in terms of programming?** A: The programming model for the Intel microprocessors is based on the x86 instruction set architecture, which provides a comprehensive set of operations. Higher-level languages such as C and C++ can be used to develop programs for these processors.

**Q: What are the main differences between the 8086/8088 and 80186/80188 microprocessors?** A: The 8086/8088 processors are 16-bit microprocessors with an 8-bit data bus, while the 80186/80188 processors are 16-bit microprocessors with a 16-bit data bus. This difference allows the 80186/80188 processors to handle larger data sets more efficiently.

**Q: How does the 80286 microprocessor compare to the 8086/8088 microprocessors?** A: The 80286 microprocessor is a 16-bit microprocessor with a protected memory mode, which allows it to run multiple programs simultaneously. It also has a more powerful instruction set and faster clock speeds than the 8086/8088 microprocessors.

**Q: What are the key advancements introduced in the Pentium and Pentium Pro microprocessors?** A: The Pentium microprocessor introduced a superscalar design, which allows it to execute multiple instructions simultaneously. The Pentium Pro microprocessor further improved performance by incorporating a dual-bus architecture, larger cache memories, and an optimized instruction pipeline.
