A4: To identify the ECT, locate the coolant outlet housing on the engine block. The sensor will be connected to it with a single electrical connector. To replace the sensor, disconnect the electrical connector, unscrew the old sensor using a socket wrench, and screw in the new sensor.

Q5: Is it necessary to flush the coolant when replacing the engine coolant sensor?

A5: It is not always necessary to flush the coolant when replacing the ECT, but it is recommended as a good practice to ensure that the coolant system is clean and free

of contaminants. Flushing the coolant involves draining the old coolant and refilling it with fresh coolant.
