**Where should eye drops be stored?** i Store your eye drops in a cool place away from direct sunlight. Some eye drops need to be stored in the fridge; if this is the case keep them in the original box and do not allow them to freeze. The information leaflet that comes with your drops will tell you if they need to be kept in the fridge.

**What is the device for putting in eyedrops?** Nanodropper. The Nanodropper (Nanodropper) is an eye drop bottle adapter made of a soft and flexible medical-grade silicone. It features an elongated tip to allow the user to hold the bottle farther from the eye and better aim the drops.

**What is an eye drop dispenser?** The Autodrop is another small device suitable for a wide variety of eye drop bottles. It's an eyepiece that holds the bottle and helps aim the drop into your eye, while you squeeze the bottle with your fingers.

**How do you hold an eye drop bottle?** Tilt your head back and look up. With 1 hand, pull your lower eyelid down and away from your eyeball — this makes a “pocket” for the drops. With the other hand, hold the eye drop bottle upside down with the tip just above the pocket. Squeeze the prescribed number of eye drops into the pocket.

**What is the storage condition of eye drops?** It's also important to store your eye drops as directed on the bottle or package insert. Some drops are stored at room temperature, while others need refrigeration. These instructions may differ once the bottle is opened. Look at each bottle label or package insert to find this information.

**How should antibiotic eye drops be stored?** How do you store antibiotics? Most eye drops/ointments can be stored at room temperature and should be thrown away four weeks after you open them. Some antibiotics need to be stored in a fridge and

some need to be thrown away after one week. Check with your pharmacist when you need to discard the medication.

**How do you space eye drops?** If you need to put a second eye drop into the same eye, wait at least 5 to 10 minutes after putting in the first drop. Put the cap back on the bottle. Don't touch the dropper tip or try to clean it.

**What is Eyedropper tool?** The Eyedropper tool can sample colors from anywhere in an image and add them to your Swatches panel. Select the Eyedropper tool (I) . Use the Options Bar to customize tool settings, like Sample Size and Sample, to get the effect you want.

**How do you keep eye drops in your eyes?** Once the drop is on the eye, do not blink your eye or move it around to spread the drop. Instead, gently close your eyes just once, place the pad of your most sensitive finger at the inside corner of the eyelid by the nose and press gently. Leave the eyelids closed and the finger pressing gently for 2 full minutes.

**Do eye drops need to be kept in the fridge?** Some eye drops only need to be kept refrigerated until they are opened, and then they can be kept out, as long as the temperature where they are stored doesn't go above 25 degrees. Thankfully, there are two products available to help keep your eye drops cool.

**How do you store eye drops at home?** For example, 'store at room temperature', 'store it away from direct sunlight', 'chilled storage', '2-8° storage'. Even if there is no instruction, avoid direct sunlight and keep the eye drops in a cool place as much as possible. ? Keep the cap firmly and keep the eye drop clean after using it.

**Can I put eye drops in hand luggage?** Restrictions don't apply to essential medications provided you have a note from a doctor to prove it. With the doctor's note, you can keep any medicine you need on you in your hand luggage – including liquid medicines, cooling gel packs, tablets and hypodermic syringes - and these can be larger than 100ml.

**Does it matter where you put eye drops?** PUT YOUR DROPS IN THE RIGHT WAY - aim for the outer corner of your eye. You can pull down your lower lid to create a little pocket for the drops to go into.
