Is it mathematics or math magician? Mathemagician is a neologism, specifically a portmanteau, that combines mathematician and magician. A great number of self-working mentalism tricks rely on mathematical principles, such as Gilbreath's principle. Max Maven often utilizes this type of magic in his performance.

Why is 1089 a magic number? The mystery is this: first, take any three digit number, where the first and last digits differ by two or more and reverse the number to produce a new one. Then subtract the smaller from the larger producing another new number. If you reverse this number and this time add the two, the result will always be 1089.

What is magical maths? Magic Maths is far more systematic, simplified and unified than conventional system. For an example, confidence and fun amongst learners can be built in seconds through solving a complex calculation such as $2301 \div 9$, 98×97 in less than 5 seconds mentally using ingenious Algorithms.

The Win Without Pitching Manifesto: A Q&A with Blair Enns

The "Win Without Pitching Manifesto" by Blair Enns advocates for a radically different approach to sales, one that prioritizes building relationships and providing value over traditional sales pitches. A: A common misconception is that Win Without Pitching means never presenting a solution. On the contrary, salespeople should still present their offerings when appropriate. However, the focus is on educating and informing the customer rather
