Significant Figures, Exponents, and Scientific Notation

Paragraph 1:

Significant figures are digits that are known with certainty, plus one estimated digit. They represent the accuracy of a measurement or calculation. When performing calculations, the number of significant figures in the final answer is determined by the number of significant figures in the least significant quantity involved.

Paragraph 2:

Exponents are used to represent numbers in scientific notation. Scientific notation is a way of expressing very large or very small numbers in a more compact form. The exponent represents the number of times the base (10) is multiplied by itself. For example, 2.5×10^3 is equal to 2500.

Paragraph 3:

Question: How many significant figures are there in the number 0.00320?

Answer: There are 3 significant figures: 3, 2, and 0 (the leading zeros are not significant).

Paragraph 4:

Question: Express 1,234,567 in scientific notation.

Answer: 1.234567×10^6

Paragraph 5:

Question: Perform the following calculation and express the answer in scientific notation with the correct number of significant figures:

$$2.34 \times 10^3 + 1.5 \times 10^2$$

Answer: 2.494×10^3 (3 significant figures, determined by the least significant quantity, 1.5×10^2)
