The Invisible Gorilla and Other Ways Our Intuitions Deceive Us

By Christopher Chabris

Our brains are constantly trying to make sense of the world around us. But sometimes, our intuitions lead us astray. In his book, "The Invisible Gorilla and Other Ways Our Intuitions Deceive Us," Christopher Chabris explores how our brains can make mistakes and how we can avoid being fooled by them.

What is the invisible gorilla?

The invisible gorilla is a famous experiment that demonstrates how our brains can be fooled by our attention. In the experiment, participants watch a video of two teams of people passing basketballs. They are instructed to count how many times one team passes the ball. Midway through the video, a person dressed in a gorilla suit walks across the screen. Most participants fail to notice the gorilla because they are so focused on counting the basketball passes.

Why do we fail to see the gorilla?

There are two main reasons why we fail to see the gorilla. First, our brains are very good at filtering out irrelevant information. When we are focused on something, we tend to ignore everything else. Second, our brains have a tendency to fill in the gaps in our visual field. When we see something that is partially hidden, our brains automatically fill in the rest of the image.

How can we avoid being fooled by our intuitions?

There are a few things we can do to avoid being fooled by our intuitions. First, we can be more aware of how our brains work. We can remember that our brains are not always accurate and that we are susceptible to being fooled by our intuitions. Second, we can slow down and take our time when making decisions. We can try to gather as much information as possible before we make a judgment. Finally, we can be open to feedback from others. We can ask friends, family, or colleagues to give us their opinions on our decisions.

Conclusion

Our intuitions are powerful tools, but they can also be misleading. It is important to be aware of the limitations of our intuitions and to take steps to avoid being fooled by them. By being more aware of how our brains work, slowing down, and gathering feedback from others, we can make better decisions and avoid being misled by our intuitions.
