6th Grade Rate Word Problems: What You Need to Know

Rate word problems are a common type of math problem that students encounter in 6th grade. These problems involve finding the rate at which something is happening.

For example, a problem might ask you to find the speed of a car that travels 60 miles in 2 hours. To solve this problem, you would need to divide the distance by the time to get the rate, which is 30 miles per hour.

Here are some tips for solving rate word problems:

1. **Read the problem carefully.** Make sure you understand what the problem is asking you to find.
2. **Identify the rate.** The rate is the amount of something that is happening per unit of time.
3. **Set up an equation.** The equation will usually be in the form of $\text{rate} = \text{distance} / \text{time}$.
4. **Solve the equation.** Divide the distance by the time to get the rate.

Here are some examples of rate word problems:

1. A car travels 60 miles in 2 hours. What is the speed of the car?
2. A train travels 120 miles in 3 hours. What is the speed of the train?
3. A water pipe fills a bathtub at a rate of 2 gallons per minute. How many gallons of water will be in the bathtub after 10 minutes?

Answers

1. The speed of the car is 30 miles per hour.

2. The speed of the train is 40 miles per hour.
3. There will be 20 gallons of water in the bathtub after 10 minutes.

Rate word problems can be challenging, but with practice, you can learn to solve them with ease.
