Understanding Ignition Switch Wiring**

An ignition switch is a critical component in a vehicle's electrical system, responsible for controlling the flow of electricity to power various systems. Here's a comprehensive guide to ignition switch wiring.

Wires Connected to Ignition Switch:

- **Power Wire:** This wire supplies power from the battery to the ignition switch.
- **Ignition Wire:** This wire sends power to the ignition coil and other components.
- **Accessory Wire:** This wire provides power to accessories like the radio and power windows.

Labels on Ignition Switch:

- **R1 and R2:** These terminals receive power from the battery and distribute it to the other terminals.
- **C:** This terminal is connected to the ignition coil.
- **S1 and S2:** These terminals connect to the starter solenoid.
- **1, 2, 3:** These numbers indicate the switch positions: 1 (Off), 2 (Accessory), 3 (On).

Numbers on Ignition Switch Back:

- **30:** Power terminal that receives power from the battery.
- **15:** Ignition terminal that sends power to the ignition coil.

- **17:** Accessory terminal that supplies power to accessories.
- **50:** Starter terminal that connects to the starter solenoid.

Color Codes for Ignition Wires:

- **Red:** Power wire
- **Yellow:** Ignition wire
- **Blue:** Accessory wire

Additional Information:

- **Terminals on Ignition Switch:** R1, R2, C, S1, S2
- **Types of Ignition Wires:** Copper core, stainless steel core, hybrid wires
- **Parts Connected to Ignition Switch:** Ignition coil, starter motor, accessories
- **Ignition Wiring Sets:** Complete sets of ignition wires that connect to the ignition coil and spark plugs
- **Hot Wire on Light Switch:** It does not matter which wire is connected to the hot terminal of a light switch.
- **Switch Wire Connection:** Wires should be connected to the terminals based on the switch type (single-pole, double-pole).
- **Black and White Wire on Light Switch:** Black goes to the power source, white connects to the light fixture.
- **Positive and Negative on Ignition Coil:** Positive terminal receives power from the ignition switch; Negative terminal grounds to the engine block.
- **Ignition Connection:** Ignition switch connects to the ignition coil, distributor, and ECM.
- **Ignition Lead Connection:** Ignition leads connect to the spark plugs.
- **Accessory Position on Ignition Switch:** Powers accessories without engaging the ignition system.
