**What are the physical properties of hydrocarbons?** Hydrocarbons are nonpolar substances, with weak intermolecular forces. Their properties are influenced by the lack of strong intermolecular attractive forces. As a group they have relatively low melting and boiling temperatures, and they are poorly or not at all soluble in polar solvents, including water.

**What is a physical property and give two examples of this for a general substance?** A physical property is a characteristic of matter that is not associated with a change in its chemical composition. Familiar examples of physical properties include density, color, hardness, melting and boiling points, and electrical conductivity.

**Can you crack alkenes?** In thermal cracking, high temperatures (typically in the range of 450°C to 750°C) and pressures (up to about 70 atmospheres) are used to break the large hydrocarbons into smaller ones. Thermal cracking gives mixtures of products containing high proportions of hydrocarbons with double bonds - alkenes.

**What are the 3 types of hydrocarbons?** The three types of aliphatic hydrocarbons are alkanes, alkenes, and alkynes. Aromatic hydrocarbons include benzene. Overall, examples of hydrocarbons are methane, ethane, propane, and butane.

**What are 10 examples of a physical property?** Some examples of physical properties include colour, hardness, malleability, weight, electrical conductivity, solubility, and mass. Other examples of physical properties are mass, density, size,

melting point, boiling point, length, and volume.

**What are 7 examples of chemical properties?** 10 examples of chemical properties include flammability, toxicity, solubility, heat from combustion, radioactivity, types of chemical bonds formed, coordination number, oxidization states, and acidity or basicity.

**What are 5 physical properties of?** Physical Properties of Matter A physical property is an attribute of matter that is independent of its chemical composition. Density, colour, hardness, melting and boiling points, and electrical conductivity are all examples of physical properties.

**How to crack hydrocarbons?** There are several different methods of cracking, including thermal cracking, catalytic cracking, and hydrocracking. Thermal cracking uses heat to break down large hydrocarbon molecules, while catalytic cracking uses a catalyst to speed up the reaction.

**Can you burn alkenes?** Alkenes can undergo incomplete combustion. When burnt in air, alkenes undergo incomplete combustion. They form carbon, carbon monoxide, carbon dioxide, water and air. Burning alkenes in air produces a smoky flame.

**What are alkenes easily attacked by?** Alkenes are easily attacked by electrophilic reagents. Alkenes are unstable molecules in comparison to alkenes. Preparation of alcohols from alkenes involves the electrophilic attack on alkene carbon atom.

**What is another name for a hydrocarbon?** Saturated aliphatic hydrocarbons are sometimes referred to as 'paraffins'. Aliphatic hydrocarbons containing a double bond between carbon atoms are sometimes referred to as 'olefins'.

**What are the hydrocarbons C1 C2 C3 C4?** Methane (C1) is almost always the dominant component of the natural gas mixtures. Usually accompanying C1 are other hydrocarbon gases, including ethane (C2), propane (C3), isobutane (i-C4), and normal butane (n C4), that are present in variable amounts from traces to 30-40 percent collectively.

**Is acetone a hydrocarbon?** Acetone is a colourless, highly-flammable liquid hydrocarbon with a sweet smell and the formula  $\text{CH}_3\text{COCH}_3$ . It is widely used as a solvent in laboratories and is readily soluble in water, ethanol, and other common

solvents.

**What are 4 characteristics of hydrocarbons?** Hydrocarbons have no colour and no odour. The boiling point of hydrocarbons shoots up as the number of carbon atoms increases. Hydrocarbons undergo a combustion reaction with oxygen, resulting in the formation of CO<sub>2</sub> and water. When compared to other classes of hydrocarbons, alkanes are the least reactive.

**What are the physical properties of hydrocarbon derivatives?** As hydrocarbon derivatives get larger, their polarity becomes less significant, and the molecules are less soluble in water. Big hydrocarbons are insoluble, meaning they do not mix with water. Hydrocarbon derivatives also have relatively higher boiling points than regular hydrocarbons.

**What are the trends in physical properties of hydrocarbons?** As the hydrocarbon chain length increases, boiling point increases. As the hydrocarbon chain length increases, viscosity increases. As the hydrocarbon chain length increases, flammability decreases. Hydrogen in the fuels are oxidised, releasing carbon dioxide, water and energy.

**What are the three physical properties of carbon compounds?**

### **The Prodigal God: Recovering the Heart of the Christian Faith**

In the parable of the prodigal son, we find a profound revelation of God's nature. The prodigal son represents humanity, lost and estranged from God. But in the father's unwavering love, we see the heart of the Christian faith.

**Question 1: What does the prodigal son parable reveal about God?**

**Answer:** The parable shows that God is a loving Father who longs for the return of his lost children. He does not condemn them or turn them away, but waits patiently for them to turn back to him.

**Question 2: How can we understand God's love in the context of justice?**

**Answer:** God's love is not a blind love that ignores sin. He is both loving and just, and his love is restorative. His forgiveness does not excuse sin but seeks to reconcile humanity to himself.

**Question 3: What does it mean to "recover the heart of the Christian faith"?**

**Answer:** Recovering the heart of the Christian faith means rediscovering the centrality of God's love in all aspects of our faith. It involves recognizing that God is not a distant, wrathful deity but an intimate, compassionate Father.

**Question 4: How does God's love transform our lives?**

**Answer:** God's love empowers us to love others as he loves us. It liberates us from guilt, shame, and fear, and it fills us with joy and peace. It gives us hope even in the midst of suffering, knowing that we have a Father who cares for us.

**Question 5: What is our response to God's love?**

**Answer:** Our response should be one of gratitude, repentance, and obedience. We should acknowledge our sin and turn back to God, trusting in his mercy and forgiveness. We should also strive to love others as he loves us, showing compassion, forgiveness, and grace to all.

As we embrace the prodigal God, we discover the true heart of the Christian faith. We find a God who loves us unconditionally, who seeks to reconcile us to himself, and who empowers us to live lives of love, forgiveness, and hope.
