How much does an AISC membership cost?

What are the three 3 main steel making processes? Of the three major steelmaking processes—basic oxygen, open hearth, and electric arc—the first two, with few exceptions, use liquid blast-furnace iron and scrap as raw material and the latter uses a solid charge of scrap and DRI.

What are the four major steel making processes? Today there are two major commercial processes for making steel, namely basic oxygen steelmaking, which has liquid pig-iron from the blast furnace and scrap steel as the main feed materials, and electric arc furnace (EAF) steelmaking, which uses scrap steel or direct reduced iron (DRI) as the main feed materials.

What are the basic construction methods for steel structures? Currently, there are three standard methods for steel structure design, including simple design, continuous design, and semi-continuous design. Joints in structures have been assumed as either pinned or rigid in order to export exact calculation values.

What is the latest AISC code? The latest edition of the American Institute of Steel Construction (AISC) flagship standard, the “2022 Specification for Structural Steel Buildings (ANSI/AISC 360)” (the Specification), has hit the streets (get it at aisc.org/2022spec).

What is new in the AISC 16th edition? The 16th edition features: New 50 ksi steel design tables. Properties and dimensions for 210 new HSS shapes. Revised and expanded discussion of prying action.

When did the 15th edition of steel Manual come out? The 15th Edition Steel Construction Manual was first released in 2017.

What is the latest edition of AISI? This 2022 edition incorporates Supplement 1 into the 2020 edition. Q2: What are the key specifications for 3LPE and 3LPP coatings?

HPCL's specifications for 3LPE and 3LPP coatings include requirements for:

- Material type: Polyethylene (PE) or polypropylene (PP)
- Layer thicknesses: Primer, adhesive, and topcoat layers
- Adhesion strength: Peel strength and cross cut adhesion

- Resistance to impact, abrasion, and cathodic disbondment
- Temperature range: Minimum and maximum operating temperatures
- Electrical continuity: Continuity of the protective coating system

Q3: What are the inspection and testing procedures?

Coating inspectors must verify compliance with the specifications through:

- Visual examination: Checking for defects, irregularities, or damage
- Thickness measurements: Using thickness gauges or ultrasonic testing
- Adhesion testing: Performing peel tests and cross-cut adhesion tests
- Electrical continuity testing: Ensuring the coating's electrical continuity

Q4: What are the advantages of 3LPE and 3LPP coatings?

These coatings offer several advantages, including:

- Excellent corrosion protection: High resistance to acids, alkalis, and other corrosive substances
- Durability: Long-lasting performance under harsh environmental conditions
- Low maintenance costs: Minimal repairs and maintenance required
- Improved flow efficiency: Smooth coating reduces friction and improves flow rates

Q5: How are 3LPE and 3LPP coatings applied?

The coating process involves:

- Surface preparation: Cleaning and blasting the pipe surface
- Primer application: Applying an anti-corrosion primer
- Adhesive application: Applying an adhesive layer to enhance bonding
- Topcoat application: Applying a thick layer of polyethylene or polypropylene
- Inspection and testing: Conducting rigorous inspections and testing to ensure quality and compliance
