### **Toggle Switches in the Boeing 737NG**

#### **What are toggle switches in the Boeing 737NG?**

Toggle switches are two-position switches that are used to control various systems and functions in the aircraft. They are typically located on the overhead panel, center pedestal, and sidewall panels. Toggle switches have a rocker arm that can be moved up or down to change their position.

#### **What are the different types of toggle switches in the Boeing 737NG?**

There are a variety of different types of toggle switches in the Boeing 737NG, each with a specific purpose. Some of the most common types of toggle switches include:

- **Power switches:** These switches control the flow of electrical power to various systems and components.
- **Control switches:** These switches control the operation of various systems and functions, such as the flaps, spoilers, and landing gear.
- **Indicator switches:** These switches indicate the status of various systems and functions, such as the engine status and fuel level.

#### **How do toggle switches work?**

Toggle switches work by mechanically connecting or disconnecting two electrical contacts. When the rocker arm is moved up, the contacts are connected and electrical current can flow through the switch. When the rocker arm is moved down, the contacts are disconnected and electrical current cannot flow through the switch.

### **What are some of the safety features of toggle switches?**

Toggle switches are designed with a number of safety features to prevent accidental operation. These features include:

- **Guarded switches:** Some toggle switches are guarded to prevent accidental operation. Guarded switches have a cover that must be lifted before the switch can be operated.
- **Interlock switches:** Interlock switches are designed to prevent the operation of one switch from interfering with the operation of another switch. Interlock switches are typically used to prevent the operation of conflicting systems.

### **How are toggle switches maintained?**

Toggle switches are typically maintained by visual inspection and cleaning. The switches should be inspected for any signs of damage or wear. The contacts should be cleaned with a contact cleaner to ensure proper electrical conductivity.
