What is the main rule for data analysis? Clarity is Key: Start with a clear goal and a well-defined objective. Quality Matters: Clean, accurate data is the foundation of good analysis. Visualize Insights: Visualizations are powerful tools for data exploration. Tell a Story: Make your data relatable by telling a compelling narrative.

How do I analyze data? Evaluate the data Investigate the data you've gathered carefully. Use various mathematical interventions to look for connections between points. Interpret what the data could mean and why it could be important for the organization.

What is the first step in data analysis? The first step in any data analysis process is to define your objective. In data analytics jargon, this is sometimes called the 'problem statement'. Defining your objective means coming up with a hypothesis and figuring how to test it.
