Secondary 1 Geography Exam Paper: Analyzing Key Concepts

Paragraph 1:

- Question: Define geography and explain its two main branches.
- Answer: Geography is the study of the Earth's surface and the distribution of humans and their activities. Its two main branches are physical geography, which examines the Earth's physical features, and human geography, which explores the relationship between humans and their environment.

Paragraph 2:

- Question: Describe the difference between a map and a globe.
- Answer: A map is a two-dimensional representation of the Earth, while a globe is a three-dimensional model. Maps can distort distances and areas, while globes show the Earth's shape more accurately. Maps are commonly used for navigation and referencing specific locations, while globes are useful for understanding global patterns and scale.

Paragraph 3:

- Question: Explain the concept of longitude and latitude.
- Answer: Longitude is an imaginary line running from the North Pole to the South Pole. It measures the distance east or west of the Prime Meridian, which is located at 0° longitude. Latitude is an imaginary line running parallel to the equator. It measures the distance north or south of the equator, which is located at 0° latitude.

Paragraph 4:

- Question: Describe the key factors that influence climate.
- Answer: Climate is the long-term average of weather conditions in a particular area. Key factors that influence climate include latitude, altitude, distance from large bodies of water, and prevailing wind patterns. Latitude determines the amount of sunlight an area receives, altitude affects temperature, proximity to water bodies influences precipitation, and wind patterns distribute heat and water vapor.

Paragraph 5:

- Question: Explain the importance of natural resources in human societies.
- Answer: Natural resources are materials and substances found in nature that are exploited for human use. They include renewable resources (e.g., water, forests) and non-renewable resources (e.g., fossil fuels, minerals). Natural resources provide essential materials, energy, and sustenance for human activities. Their exploitation, however, can have both positive and negative environmental and social impacts.
