**The Spread of Pathogens**

## What are pathogens?

A pathogen is a microorganism that causes disease. Pathogens can be bacteria, viruses, fungi, or parasites. They can spread from person to person through contact with infected blood, bodily fluids, or contaminated surfaces.

## How do pathogens spread?

There are four main ways that pathogens can spread:

- **Contact transmission:** This occurs when someone comes into direct contact with an infected person or animal.
- **Airborne transmission:** This occurs when someone breathes in airborne droplets that contain pathogens.
- **Waterborne transmission:** This occurs when someone drinks or comes into contact with contaminated water.
- **Foodborne transmission:** This occurs when someone eats food that has been contaminated with pathogens.

## What are the symptoms of pathogenic diseases?

The symptoms of pathogenic diseases can vary depending on the type of pathogen and the individual's immune system. Some common symptoms include:

- Fever
- Chills
- Cough
- Sore throat
- Runny nose
- Nausea
- Vomiting
- Diarrhea

## How can we prevent the spread of pathogens?

There are a number of things we can do to prevent the spread of pathogens, including:

- Washing our hands frequently
- Covering our mouths and noses when we cough or sneeze
- Staying home from work or school if we are sick
- Cleaning and disinfecting surfaces that may be contaminated
